PITCH DECK | APPLIED MATERIALS GLOBAL PRODUCT MARKETING IV/V

This req asks for three things at once: competitive analysis sharp enough to drive Red Team Analysis, pricing strategy disciplined enough to protect margin, and enough range with Engineering, Manufacturing and Sales to carry a product through its full life cycle. I already run all three.

A margin-recovery program, a Red Team-style benchmarking habit, and a cross-functional product backlog, on the same calendar as everything else.

$700K+ margin recovered in 2 quarters leading Sensata's Bleeders and Leakers program

Competitive analysis across 10+ key players, a one-person Red Team against pricing and share moves

+12% YoY revenue, +8% market share from price realignment

100+ feature backlog aligned with Engineering and Manufacturing across 3 regions, -20% time-to-market

AI agents built on Claude automating recurring market and competitive analysis

WHY THIS DECK EXISTS

The req reads as one title. It is really three disciplines that have to run as one loop.

What the role actually requires

Complex-scope business and marketing plans that assess market penetration and product positioning well enough to drive competitive advantage, not just describe the market.

Complex competitive analysis for specific products or product lines, including Red Team Analysis against the field's own moves.

Pricing strategies that protect a leadership position in market share while still enhancing profit margins, partnered with Engineering, Manufacturing and Sales through the product's full life cycle.

What I have already run

At **Sensata**, I ran competitive benchmarking across 10+ key players and used it to realign price into +12% YoY revenue and +8% market share, the Red Team habit this req names directly.

I led the **Bleeders and Leakers** program to $700K+ in margin recovered in two quarters, then rebuilt distributor and channel-partner pricing from 53% to 61% margin.

I aligned **Engineering and Manufacturing** on a 100+ feature product backlog across 3 regions, and today I size new-product investment decisions with Sales, Engineering and Accounts.

> **The through-line: every pricing call I have made was built on competitive analysis I ran myself first, not a market view handed to me by someone else.**

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Develops complex scope business and marketing plans, assesses market penetration and product positioning to drive competitive advantage, revenue and market share."*

> *"Conducts complex competitive analysis for specific products or product lines. Drives Red Team Analysis."*

> *"Assists with complex pricing strategies to build and protect a leadership position in market share while enhancing profit margins."*

> *"Partners with Engineering, Manufacturing and Sales to develop new products and enhance existing products."*

My proof

Sensata, price realignment: +12% YoY revenue and +8% market share, built on a competitive-benchmarking refresh across 10+ key players.

Sensata, Red Team-style analysis: ran competitive analysis as a one-person function against competitor pricing and share moves, the same analytical posture this req calls Red Team Analysis.

Sensata, margin and leadership position: $700K+ margin recovered in 2 quarters, distributor and channel-partner margins raised from 53% to 61%.

Sensata and current role, cross-functional build: aligned Engineering and Manufacturing on a 100+ feature backlog across 3 regions; today size investment decisions with Sales, Engineering and Accounts.

THE PROOF, IN DEPTH

Run the competitive analysis first, then let the pricing call and the cross-functional build follow it, not the other way around.

Same pattern across every stop: benchmark the field, make the pricing or positioning call from that benchmark, then carry it through Engineering, Manufacturing and Sales until it ships.

$700K+

Margin Recovered in 2 Quarters

Led the Bleeders and Leakers program at Sensata, then raised distributor and channel-partner margins from 53% to 61% on top of it.

10+ Key Players

Competitive Benchmarking, Red Team Style

Ran complex competitive analysis against pricing and share moves across the field, turning it into a price realignment that drove +12% YoY revenue and +8% market share.

100+ Features

Backlog Aligned With Engineering & Manufacturing

Managed across 3 regions, cutting time-to-market 20%, the cross-functional build this req runs across new and existing products.

None of these were a market view handed down from someone else. Each one started with me running the analysis, then making the call.

FIRST 30 DAYS

What the first month owning this mandate looks like.

WEEK 1

Map the current competitive and pricing picture

Pull the existing Red Team Analysis, pricing tools and competitive benchmarks for the assigned product lines, and find where market penetration and positioning data is thin or stale.

Why first: the same first move behind the Sensata benchmarking refresh, know the field before recommending a price or positioning change.

WEEK 2-3

Run one complex competitive analysis end to end

Pick the highest-stakes product line, rebuild the Red Team view against 10+ real competitors, and turn it into a specific pricing or positioning recommendation with Engineering, Manufacturing and Sales.

Why now: the same build that moved Sensata's price realignment to +12% YoY revenue and +8% market share.

WEEK 4

Stand up the recurring reporting loop

Automate the repetitive side of that competitive and market analysis with the first AI agent, built on Claude, so the Red Team view refreshes every cycle instead of once.

Why this fast: the same habit that keeps my own market and competitive reporting moving today.

CLOSE

This req is three disciplines stitched into one title: Red Team competitive analysis, margin-protecting pricing strategy, and a cross-functional build with Engineering, Manufacturing and Sales. I have already put a number on each one.

The competitive-analysis half: **10+ key players** benchmarked at Sensata, turned into a price realignment that drove **+12% YoY revenue and +8% market share**.

The pricing half: **$700K+ in margin recovered** in two quarters leading the Bleeders and Leakers program, plus distributor margins raised from 53% to 61%. The cross-functional half: a **100+ feature backlog** aligned with Engineering and Manufacturing across 3 regions, and AI agents built on Claude now automating the recurring analysis behind all of it.
