Hiring Team, Applied Materials

At Sensata, I ran competitive benchmarking across 10+ key players as a one-person Red Team against competitor pricing and share moves, then used it to realign price and drive +12% YoY revenue and +8% market share. That is the muscle this req calls complex competitive analysis and Red Team Analysis, and it is the part of the job I find most interesting: reading a market well enough to make a call on it, not just report on it.

Protecting margin while building the pricing tools a product introduction needs is the other half of this role, and it is the half I ran next. I led Sensata's Bleeders and Leakers program to $700K+ in margin recovered in two quarters, then rebuilt distributor and channel-partner pricing from 53% to 61% margin, the same discipline this posting asks for in building and protecting a leadership position in market share while enhancing profit margins.

Partnering with Engineering and Manufacturing on what to build next, and when, is work I already run day to day. At Sensata I aligned Engineering and Manufacturing on a 100+ feature backlog across 3 regions, cutting time-to-market 20%. In my current role I size market penetration and new-product investment decisions with Sales, Engineering and Accounts, and automate the repetitive side of that analysis with Claude AI agents so more hours go into the judgment calls only a person can make.
