PITCH DECK | ALCATRAZ SR. PRODUCT MARKETING MANAGER

Facial-authentication access control sells into four different buyers at once. I have already built the engine that turns one product into four buyer-specific stories, shipped it to 50+ reps, and watched win rates move.

Positioning, launches, battlecards and win/loss, built by a marketer who runs the AI-tools-to-automate-workflows habit day to day.

- **$2M+** first-year revenue from a GTM owned end to end at Sensata
- **+30% win rate** from sales enablement and battlecards built for 50+ reps
- **+15% conversion** after a positioning rewrite on priority launches
- **AI agents on Claude** run the recurring go-to-market analysis today
- **30+ interviews** pressure-tested messaging before launch, not after

WHY THIS DECK EXISTS

One product, four buyers. Security, IT, facilities and the executive sponsor all need a different reason to say yes.

What a posting like this one runs into

A privacy-first facial-authentication product has to read as a security upgrade to the security team, an integration decision to IT, a day-to-day operations change to facilities, and a budget line to the executive sponsor, often inside the same deal.

Every launch and every feature needs its own translation pass for that buyer list, plus the demand-gen content, battlecards and demo videos sales actually uses, not a deck that sits in a shared drive.

The fix is the same one lean, high-growth product marketing teams reach for: AI tools that automate the repeatable half of the workflow, so the team's time goes into the translation work only a person can do.

What I have already run, at smaller scale

At **Sensata**, I owned the GTM for a new sensing line end to end across North America and Europe: positioning, pricing, channel and launch, closing the year at $2M+ revenue.

I rewrote the positioning so technical sensor capability read as buyer value for engineering, operations and executive audiences, lifting conversion **15%**, then built the battlecards and enablement **50+ reps** carried into the field.

I run the AI-tools-to-automate-workflows habit daily at **Applied Materials**, automating recurring go-to-market analysis with agents built on Claude instead of doing it by hand every cycle.

Positioning for security, IT, facilities and executive audiences, leading GTM planning and launches, translating technical concepts into stories, and building the demand-gen content and sales enablement that follows, is the exact loop above: position it for the buyer in the room, enable sales, measure what won, template it, repeat.

THE REQ, MAPPED

What the Sr. Product Marketing Manager opening asks for, and where the proof sits.

What the role covers

> *"Create positioning and messaging for security, IT, facilities and executive audiences."*

> *"Lead go-to-market planning and launches for new products and features."*

> *"Translate technical concepts into stories; produce demand-gen content and sales enablement, including battlecards, pitch decks and demo videos."*

> *"Conduct market research, competitive analysis and win/loss programs; track program performance."*

> *5-7+ years in product marketing, ideally B2B SaaS or enterprise tech; experience using AI tools to automate workflows.*

My Proof

Sensata GTM, owned end to end: positioning, pricing, channel and launch for a new sensing line across North America and Europe, closing the year at $2M+ first-year revenue.

Positioning rewrite for a technical audience: turned sensor capability into buyer-ready value for engineering, operations and executives, lifting conversion 15%, after 30+ interviews with OEMs and distributors.

Sales enablement built, not handed off: battlecards, decks and case studies for 50+ reps, lifting win rates 30%.

Competitive tracking feeding roadmaps: tracked competitive activity and program performance across EMEA and the US at Sensata, feeding results back into GTM and product roadmaps.

AI tools automating the workflow today: AI agents built on Claude run recurring go-to-market analysis at Applied Materials; shipped an AI product (SwipeHire) solo, PRD to launch.

THE SENSATA PROOF, IN DEPTH

One launch, the whole loop: position it, enable sales, measure it, feed it back.

GTM owned end to end for a new sensing line across North America and Europe: positioning, pricing, channel decisions and launch sequencing, with competitor and customer tracking across EMEA and the US feeding every call back into the roadmap.

$2M+

First-Year Revenue

The GTM for the new sensing line, owned end to end rather than handed off in pieces across teams.

+30%

Win Rate, 50+ Reps Enabled

Battlecards, case studies and decks built so sales could carry the positioning into the room themselves.

+15%

Conversion on Priority Launches

A positioning rewrite that turned deeply technical detail into language buyers acted on.

The positioning itself came from 30+ customer interviews with OEMs and distributors run before launch, not after, and the competitive and program-performance tracking that followed is the same win/loss discipline this role asks for, just running on a different product.

FIRST 30 DAYS

What the first month on Alcatraz's product marketing team looks like.

WEEK 1

Learn the current motion

Sit with the Head of Product Marketing, sales and product to map which battlecards, win/loss notes and demand-gen content exist today for each buyer (security, IT, facilities, executive), and which of it is actually winning deals.

Why first: the strongest positioning pattern is usually visible in what already closed. Same move that drove the 15% conversion lift at Sensata.

WEEK 2-3

Ship one launch, one buyer, end to end

Take one upcoming feature or launch through positioning, the sales playbook (battlecard, deck, demo video) and buyer-specific translation for one audience, working directly with sales and product.

Why now: building the story on a live launch, not a hypothetical, is what made the Sensata enablement actually get used by 50+ reps.

WEEK 4

Stand up the win/loss and AI-first loop

Template the win/loss intake and program-performance tracking, then automate the recurring half (competitive scans, report rollups) with AI tools, so the system runs on its own between launches.

Why this fast: a win/loss program only earns its name once it is feeding the next positioning pass, not sitting in a spreadsheet nobody opens.

CLOSE

You are hiring someone to make one product read right to four different buyers, and to keep proving it with win/loss data. I have already run that loop once, and I run the AI-first habit every day that keeps it fast.

The core proof is Sensata: a GTM owned end to end to **$2M+ first-year revenue**, a positioning rewrite that lifted conversion **15%**, and sales enablement that moved win rates **30%** across 50+ reps, all pressure-tested with 30+ customer interviews before launch.

What is harder to find is someone who already runs the AI-tools-to-automate-workflows half too. **AI agents built on Claude handle my recurring go-to-market analysis right now** at Applied Materials, and I shipped an AI product solo from PRD to launch, so the automation habit is not something I would need to learn on the job.
