

PITCH DECK | FIVETRAN GROWTH MARKETING STRATEGY & PLANNING MANAGER

Your Growth org needs one documented model that says where the next dollar goes and what it buys. I have already built that model, just under a pricing label instead of a marketing one.

Target setting, CAC-by-channel ROI, and executive-ready pipeline models built by someone who runs that exact discipline today.

\$627M opportunity set modeled in a Power BI dashboard I designed, Sensata

\$700K+ margin recovered in 2 quarters off that model's own recommendations

3x ROAS in one month from a channel-ROI holdout test at Pixis

-50% cost per lead automating the lead flow at Plug Power

Claude AI agents automate recurring forecasting and reporting work today

A planning seat like this does not fail on effort. It fails when **the model and the narrative built on top of it stop agreeing with each other.**

What a Growth org at this stage runs into

Target setting, budget allocation and pipeline coverage all run on the same assumptions, so a planning model built from ambiguous inputs has to be defensible the first time it meets Finance and a VP, not refined over three review cycles.

The risk is not a missing dashboard. It is a model whose coverage, conversion and velocity assumptions quietly drift from what Field Ops and Finance believe, until a business review surfaces the gap in front of leadership instead of before it.

The fix is a model built to be interrogated: one owner, one set of assumptions, reconciled with Finance and Field Ops before the narrative goes to the VP.

What I have already run, at comparable scale

At **Sensata**, I designed a Power BI model ranking 1,200 opportunities against a \$627M target across 3 regions and 20 product lines, then defended its own recommendations to senior executives until they became \$700K+ in recovered margin.

I did not stop at the model. I **reconciled it against real deal outcomes** every quarter, which is why the recommendations held up past the first review.

I run the same coverage-and-conversion discipline today at **PriceKeel**: forecast and pipeline reviews, deal approvals, and an audit trail Finance can check the assumptions against.

Target setting, budget allocation, and a commercial pipeline model reconciled with Field Ops and Finance are describing this exact loop: build the model once, defend its assumptions, keep it honest as the business target moves.

What the Growth Marketing Strategy and Planning Manager opening asks for, and where the proof sits.

What the role covers

- "Own marketing ROI analysis: calculate and report on cost-per-lead, cost-per-opportunity, CAC by channel, and marketing efficiency ratios."*
- "Own annual and quarterly target setting... including channel-level targets and budget allocation driven by a documented planning model."*
- "Support the weekly and monthly business review process: prepare data and partner with leadership to build a narrative that converts data into actionable insights."*

My Proof

- CAC and cost-per-lead work at Pixis and Plug Power:** ran matched holdout-vs-exposed testing on blended ROAS at Pixis (3x ROAS the next month) and cut Plug Power's cost per lead 50% by automating the WordPress-to-Pardot lead flow, tying SEM spend to MQL quality and stage 1 opportunities.
- Documented planning model at Sensata:** built the FY2026 Bleeders and Leakers Power BI dashboard: 1,200 opportunities, \$627M target, 3 regions, 20 product lines, with win rate, avg \$/win and stage distribution by salesperson and product line.
- Executive business reviews, every role:** built the leadership decks and ran the weekly and quarterly reviews behind that same data, at Sensata, Plug Power, Pixis and Applied Materials.
- AI tools as a daily habit:** automate recurring forecasting and reporting work with Claude AI agents today at Applied Materials.

Bleeders and Leakers: one planning model, one target, a recommendation that got funded and held.

Built as a BU-wide Power BI model covering 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, with a pipeline funnel, win rate, avg \$/win and stage distribution by salesperson and product line: the same target-setting and channel-level view this JD's planning model asks for.

\$433M

Margin Gaps Surfaced

The model's job: rank every opportunity on one consistent definition so leadership could prioritize by salesperson and product line instead of chasing anecdotes.

\$700K+

Margin Recovered in 2 Quarters

Closed by acting on the model's own recommendations: negotiated fixes built on competitive gaps and documented customer willingness to pay.

53% to 61%

Distributor Margin Lift

Reconciled with Finance and Sales before it shipped, so the recommendation outlived the first repricing pass.

The same BU carried P&L and revenue targets and ran multimillion-dollar customer quotes alongside senior executives, where the model's numbers had to match what Finance and Sales were already tracking before a deal moved. The common thread: one model, one owner, a recommendation that got measured after it shipped.

What the first month on Fivetran's Growth marketing planning seat looks like.

WEEK 1 Reconcile the model's own inputs Pull the current channel-level targets, budget allocation and pipeline-coverage assumptions as they exist today, and trace where Field Ops, Finance and Growth marketing are already using the same term to mean three different things. Why first: the disagreement is usually visible in the data before anyone names it. Same move that started the Bleeders and Leakers model.	WEEK 2-3 Ship the ROI and CAC view Build the cost-per-lead, cost-per-opportunity and CAC-by-channel view segmented by region, scope the dashboard with Analytics, and pressure-test the coverage and conversion assumptions against real pipeline before the next business review. Why now: ranking against one real target, then verifying with Field Ops and Finance, is what made the 53% to 61% distributor gain stick.	WEEK 4 Bring the first recommendation to the VP Turn the Week 1 and 2 findings into a first investment-level recommendation on channel mix and budget allocation, with the business-review narrative already built, so the VP of Growth is reviewing a model, not raw data. Why this fast: a planning model matters less if the first recommendation it produces does not survive contact with a VP. That is the actual ask behind "right-hand to the VP of Growth."
---	--	---

CLOSE

You are hiring someone to make the next dollar defensible before it is spent. I have already built that model, and defended it in front of people who controlled the budget.

The core proof is Sensata: **\$700K+ in margin recovered in 2 quarters** off a model I designed and defended myself, ranking 1,200 opportunities against a \$627M target across 3 regions and 20 product lines.

The channel-ROI side is not borrowed from a different job either. I cut Plug Power's **cost per lead 50%** and delivered **3x ROAS** for a Pixis client inside a month, the same CAC-by-channel and marketing-efficiency math this seat runs every quarter.
