Hiring Team, Ever.Ag

Your posting says this role is not primarily systems administration or reporting, it is a seat at the table for commercial decisions. That is the seat I built at Sensata. I ran the Bleeders and Leakers pipeline, 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, and surfaced $433M in margin gaps for leadership to act on. I closed $700K of that in two quarters and raised distributor margins from 53% to 61%, work that lives in the same spot between Sales, Finance and the customer where your Deal Review Board analyses sit.

That pricing and deal-economics work never stood alone. I partnered with senior executives on revenue models, site-transition strategy and multimillion-dollar customer quotes, the same kind of nonstandard commercial arrangement your posting flags: bundled products, multi-year terms, enterprise agreements where the discount has to be defensible, not just approved. I built that defense in Power BI, dashboards that track win rate, average dollar per win and stage distribution by salesperson, so a pricing exception comes with the evidence behind it instead of a gut call.

I am running that same discipline now as founder of PriceKeel, a tool that reads a live discount exception inside the deal platform and recommends the pricing move, learned from a company's own closed-won and closed-lost deals, with an audit trail Finance can review. It is CRM, CPQ, forecast and pipeline review, and deal approval, built from the operator's side rather than the systems-administration side, which is exactly the distinction your posting draws. I also build my own Claude-based agents to pull the manual steps out of recurring revenue analysis, the same instinct behind your ask to put automation and AI tools to work inside Salesforce.

Ever.Ag's dairy, livestock and crop customers run on contracts and margins that move with volatile commodity markets, which is a harder pricing problem than most SaaS deal desks face, and the kind I want to spend my next role on. The fuller build trail, including the Bleeders and Leakers dashboard and the PriceKeel guardrail engine, is at adhithyabhaskar.vercel.app/ref/ever-ag.
