Hiring Team, Decagon

Your posting asks for someone who can own competitive coverage for a defined portfolio and keep the battlecards, talk tracks and training sharp enough to shape a live deal, not sit in a shared drive going stale. At Sensata I built the competitive benchmarking across 10+ rival suppliers that drove a price-realignment play to +12% YoY revenue and +8% market share, then trained and armed 50+ reps with the objection handling and talk tracks that moved win rates 30%. That is the same muscle: read what a competitor is actually doing, turn it into something a rep can use mid-call, and keep it current as the category moves.

The launch half of the role is work I have already done end to end. I owned positioning through announcement and field enablement for a new sensing product with no existing playbook, driving $2M+ in first-year revenue, and ran 30+ discovery interviews with OEMs and distributors that fed directly into what Engineering built next, not a report nobody reread. I also sat with senior executives defending positioning and price against real customer pushback on multimillion-dollar quotes, which is closer to the pressure-test a battlecard has to survive than any tabletop exercise.

The line in your posting about building the templates and AI workflows that let the team move fast without losing quality is the part of my current role at Applied Materials I would point you to first. I am Strategic Marketing III there now, and the AI work is not prompting a summary, it is shipping the Claude agents that run repetitive market and competitive research so the strategic read gets more of my time, not less. That is the same instinct a scaling PMM function needs: build the system once, let it compound.

Decagon is selling into a category that is rewriting itself every quarter, which means the battlecard that worked last month is probably already behind. I would rather be the one rebuilding it in real time than handing over a static one. Proof trail at adhi-product-ai.vercel.app/ref/decagon if you want the launch, enablement and competitive work firsthand.
