Hiring Team, VRD Source

Your posting asks for someone who can take a strategic project from conceptualization straight through to execution alongside founders, not just advise on it. That is the job I already do as founder of PriceKeel, where I built the commercial architecture (CRM, CPQ, guardrail engine, audit trail) end to end and coordinate product, go-to-market and investor workstreams at once. Before that, as Pricing Lead at Sensata, I shaped AP26 revenue models and multimillion-dollar customer quotes directly with senior executives, the same leadership-level deliverable this role prepares for its founding team.

The analysis-to-dashboard pipeline your posting describes is a motion I run constantly. I built the FY2026 Bleeders and Leakers dashboard at Sensata, a performance-tracking mechanism covering 1,200 pricing opportunities against a $627M target across 3 regions and 20 product lines, and I took that program from dashboard to a negotiated $700K+ margin recovery in two quarters by identifying the opportunities and risks the data pointed to. Coordinating across investments, operations, technology and compliance is close to how I already run Sales, Engineering and Account input into one market view at Applied Materials.

I use AI tools, including Claude, as a daily habit, not a line on a form. I automate forecasting and competitive analysis with Claude agents at Applied Materials, the AI-enabled productivity your posting asks for directly, which frees time for the judgment calls a founder's agenda actually needs.
