PITCH DECK | LINKEDIN PRODUCT MARKETING MANAGER, JOB SEEKER AUDIENCE

Job seekers need a narrative that turns millions of individual searches into trust in one platform. I have already built that narrative from a blank page, for job seekers specifically, and run it again at marketplace scale.

An AI job-search platform built for job seekers, and a $2M+ GTM built on 30+ voice-of-customer interviews, on the same resume.

- **50+ early users** on an AI job-search platform built zero-to-one for job seekers
- **30+ customer interviews** turned into roadmap decisions and a +22% CSAT lift
- **$2M+ first-year revenue** from an audience-led GTM launch
- **10+-player competitive benchmark** behind a 12% YoY price move
- **AI agents built on Claude** automating my own recurring analysis today

WHY THIS DECK EXISTS

This role is not "manage a launch calendar." It is becoming the voice of the job seeker inside Product, Design, Engineering and Research, with a narrative no one else owns yet.

What that actually requires

Deep, repeated contact with job seekers themselves, qualitative and quantitative, because a roadmap built on dashboards alone misses why people actually searched in the first place.

A differentiated narrative that travels: one story that works in a launch deck, a positioning doc and an exec review, not three separate versions of the truth.

The discipline to turn audience insight into a product-investment argument, not just a campaign, because the real decision this role influences is what gets built next.

What I have already run

I built **an AI job-search platform for job seekers** from zero: the research, the ICP, the positioning and the product decisions were all mine to make.

At **Sensata**, 30+ structured customer interviews fed directly into product roadmap decisions, not just messaging, and raised CSAT 22%.

I have turned technical complexity into a story a non-technical buyer could act on immediately, lifting conversion 15% on priority launches.

The through-line: every narrative I have built started with direct audience contact, not a dashboard, and ended with a product or revenue decision it changed.

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Be the voice of the Job Seeker: develop a deep understanding of job seeker needs, motivations, pain points, and behaviors through qualitative and quantitative research."*

> *"Influence product strategy and roadmap: partner with Product, Design, Engineering, and Research to identify unmet needs, market opportunities, and emerging trends."*

> *"Lead go-to-market strategy and execution: own end-to-end go-to-market plans for new features, products, and insights."*

My proof

SwipeHire, built for job seekers: an AI job-search platform built zero-to-one, with auto-tailored resumes and visa-aware matching, onboarding 50+ early users.

Sensata, voice of the customer: 30+ structured interviews with OEMs and distributors fed straight into the product roadmap and raised CSAT 22%.

Sensata, audience-led GTM: owned positioning, messaging, channel and launch end to end for new sensing products, driving $2M+ in first-year revenue.

Sensata, roadmap ownership: defined and executed the product roadmap for an entire sensor line, managing a 100+ feature backlog with Engineering across 3 regions.

THE PROOF, IN DEPTH

Talk to the audience first, ship the narrative, then put a number on it.

Same pattern across a solo build and two roles at Sensata: get direct contact with the people who matter, turn it into a story and a roadmap argument, then measure whether it moved a number the business was accountable for.

50+ Users

AI Job-Search Platform, Zero to One

Built the ICP, positioning and product decisions for job seekers myself, with no team or playbook to inherit.

30+ Interviews

Voice of the Customer Into the Roadmap

Structured research with OEMs and distributors that shaped product decisions and lifted CSAT 22% at Sensata.

$2M+ Revenue

Audience-Led GTM, End to End

Positioning, messaging, channel and launch owned start to finish for new sensing products across two continents.

None of these was a research deck that sat in a folder. Each one closed the loop from audience insight to a product or revenue number leadership was accountable for.

FIRST 30 DAYS

What the first month on the Job Seeker audience team looks like.

WEEK 1

Listen before narrating anything

Pull the existing qualitative and quantitative research on job seeker needs, pain points and behaviors, then run the first round of direct conversations to find what the data alone cannot explain.

Why first: the same discipline behind 30+ structured interviews at Sensata, audience contact before a single slide gets built.

WEEK 2-3

Ship the first audience narrative

Build the first differentiated positioning and messaging story with Product, Design and Research, one narrative that works in a roadmap review and a launch deck, not two different versions of the truth.

Why now: the same translation that turned technical sensing features into a 15% conversion lift at Sensata.

WEEK 4

Turn insight into a roadmap argument

Package the research into a product-investment case for the next feature or insight launch, then automate the recurring reporting step with the first AI agent so the insight loop keeps running every cycle.

Why this fast: the same habit that keeps my own competitive reporting moving at Applied Materials today, not a plan for someday.

CLOSE

You are hiring someone to be the voice of the job seeker inside Product. I have already built that voice from scratch, for job seekers specifically, and run it again at marketplace scale.

The audience half: **an AI job-search platform** built zero-to-one for job seekers, 50+ early users, and 30+ structured customer interviews at Sensata that fed straight into product roadmap decisions and a 22% CSAT lift.

The GTM half: **$2M+ in first-year revenue** from an audience-led launch, plus a 10+-player competitive benchmark behind a 12% YoY price move. At Applied Materials I now automate my own recurring market analysis with agents built on Claude, because rebuilding the same report every cycle is time that should go into the next audience narrative.
