Hiring Team, Nextpower

Your posting is asking for someone who can turn a new product's pricing and configuration rules into a quoting tool before Sales ever touches it. I built exactly that kind of system at Sensata: a dynamic, logic-driven Power BI dashboard tracking 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, recovering $700K+ in margin in 2 quarters by rebuilding the underlying configuration logic deal by deal.

I set up and run the CRM and CPQ configuration myself as founder of PriceKeel, including deal approvals and forecast/pipeline reviews, and I built the audit trail that documents every pricing exception for Finance. That is the same bridge your posting describes: quoting logic and tool structure built so it can port into a CPQ platform later, not just work as a one-off spreadsheet.

The cross-functional part is familiar too. At Applied Materials I size the semiconductor market with Sales, Engineering and Accounts, turning field input into one forecasting model, and at Sensata I owned GTM integration for new sensing products across North America and Europe, from positioning and pricing to channel rollout, the same new-product-to-process bridge your posting asks this role to own for incoming BUs.

One thing I would push on gently: a quoting tool that only works for the product it was built for is already behind by the time the next BU shows up. The $433M in margin gaps the Bleeders and Leakers dashboard surfaced only mattered because the configuration logic generalized across 20 product lines, not just one. I would bring that same instinct to Nextpower, building quoting tools that assume the next BU is coming before Sales has to ask for one. Proof trail at adhithyabhaskar.vercel.app/ref/nextpower.
