PITCH DECK | NEXTPOWER SALES OPERATIONS ANALYST

One seat here owns the bridge between early-stage product configurations and scalable CPQ systems, for every new BU Nextpower brings into its quoting process. I have already run every piece of that loop, just not under solar hardware yet.

Quoting-logic ownership, CRM/CPQ system configuration and cross-functional documentation discipline from someone who already runs that loop end to end.

- **$700K+** margin recovered in 2 quarters via deal-by-deal quoting-logic rebuild at Sensata
- **53% to 61%** distributor margin lift from reworked configuration and discount logic
- **CRM + CPQ** configuration, deal approvals and audit trail owned end to end, founder of PriceKeel
- **1,200 opportunities** tracked against a $627M target across 3 regions, 4 product families, 20 lines
- **Claude AI agents** automating recurring analysis at Applied Materials

WHY THIS DECK EXISTS

This posting is really three jobs held by one person: quoting-logic owner, CPQ bridge-builder and new-BU integrator, across every product line Nextpower launches.

What losing that discipline runs into

A quoting tool built for one product does not fail loudly. It fails as a workaround nobody documented, a configuration rule that only works until the next BU shows up, and a CPQ migration that has to be reverse-engineered from someone's memory.

Sales, Product, Finance and IT all touch the same quote, so a gap in quoting logic or documentation becomes everyone's delay at the next launch, not just one team's problem.

The fix is not another spreadsheet. It is someone who treats quoting logic, CPQ bridging and new-BU documentation as one connected discipline instead of three separate jobs.

What I have already run

At **PriceKeel**, I set up and run the CRM, CPQ configuration and the audit trail myself, the same system-ownership and documentation loop this role holds for new BU integration.

At **Sensata**, I rebuilt configuration and pricing logic inside the Bleeders and Leakers program and built the Power BI dashboard that made 1,200 opportunities auditable across 20 product lines.

Both mean I have sat on the quoting side and the system-configuration side of the same bridge, not just one or the other.

A Sales Operations Analyst who owns quoting tools, bridges to CPQ platforms and integrates new BUs into standard process is describing this exact loop: build the quoting logic, document it, make it portable into a system of record.

THE REQ, MAPPED

What the Sales Operations Analyst opening asks for, and where the proof already sits.

What the role covers

> *Design, develop and maintain Excel-based quoting tools and quote automation workflows that improve quoting speed, accuracy, governance and scalability for new BUs.*

> *Implement complex logic and configuration rules to support product structures, pricing models, approval workflows and regional requirements.*

> *Serve as a bridge to enterprise quoting systems, ensuring quoting logic and configuration rules can be ported into or inform CPQ systems.*

> *Support onboarding and integration of new BUs into standard quoting processes, including data mapping, training, testing, rollout support and change management.*

My Proof

Quoting-logic rebuild: reworked discount and configuration logic inside Sensata's Bleeders and Leakers program, recovering $700K+ in margin in 2 quarters.

Complex configuration rules: built a BU-wide Power BI price-increase model with rule-based logic flagging line items for repricing across 20 product lines.

CPQ bridge: set up and run PriceKeel's own CRM and CPQ configuration end to end, the same system-of-record ownership this seat needs to port quoting logic into.

New-BU rollout and training: owned GTM integration for new sensing products at Sensata (positioning, pricing, channel), then built sales enablement and training for 50+ reps ahead of rollout.

THE PROOF, IN DEPTH

Bleeders and Leakers: make the quoting logic hold across every region and product line, not just one.

Built as a dynamic, logic-driven Power BI system covering 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with configuration rules that stayed consistent as new segments were added.

$700K+

Margin Recovered, 2 Quarters

Rebuilt the discount and approval logic behind each quote deal by deal, the same investigation this seat runs on every new BU's pricing structure.

53% to 61%

Distributor Margin Lift

Repriced the regional channel logic and documented it for governance review, so the new configuration rules held past the first quarter.

$433M

Margin Gaps Surfaced

Every gap traced to a specific product line and region, the same segment-level detail a cross-BU quoting system needs to scale.

At PriceKeel that same instinct became the operating model: I run the CRM, CPQ configuration and the audit trail myself, so the quoting tool and the documentation are never two different stories.

FIRST 30 DAYS

What the first month owning quoting tools at Nextpower looks like.

WEEK 1

Learn the current quoting tools and rules

Sit with the Sr Sales Operations Manager to walk the existing Excel quoting tools, configuration logic and approval workflows, and shadow one new-BU onboarding cycle end to end.

Why first: the same instinct that had me learn PriceKeel's own CPQ configuration before building anything on top of it.

WEEK 2-3

Own a product or BU quoting cycle

Take ownership of one new product's quoting requirements end to end: map the configuration logic, build the automation workflow, and run it past Product, Finance and Sales for sign-off.

Why now: the same cross-functional discipline that made the Bleeders and Leakers dashboard usable across 20 product lines.

WEEK 4

Document the logic and start the CPQ bridge

Write up the configuration assumptions and version-control notes behind one quoting tool, and flag which rules are ready to port into a CPQ or web-based platform next.

Why this fast: a quoting tool only scales past its first BU if the logic behind it is documented before the next one arrives.

CLOSE

You are hiring someone to keep quoting logic, CPQ bridging and new-BU integration honest across every product line. I have already built that discipline, from both sides of the quote.

The core proof is Sensata: a dynamic, logic-driven Power BI system tracking **1,200 pricing opportunities against a $627M target** across 3 regions, 4 product families and 20 product lines, with distributor margins lifted **from 53% to 61%** and $700K+ in margin recovered in 2 quarters.

What is harder to find is someone who has also spent the last several months owning the CRM, CPQ configuration and audit trail for his own company's deal flow. **I built that at PriceKeel**, so the system ownership and documentation discipline this role runs is not something I would need to learn on the job.
