Hiring Team, Visa

Your posting asks for someone who can carry a marketing program from sizing the market to running the promotion that lands once it ships. That is the shape of my current role at Applied Materials, where I size the semiconductor market with Sales, Engineering and Accounts and turn that into pricing and timing calls that keep pace with demand. Before that, at Sensata, I owned go-to-market for a new sensing product line across North America and Europe, and it closed its first year at \$2M+ in revenue with a 15% lift in launch conversion.

The cross-functional piece of the role is where I have spent most of my career, not the exception to it. I ran 30+ interviews with OEMs and distributors to find what would actually move a launch, then built the sales enablement and case studies that armed 50+ reps and lifted win rates 30%. On the pricing side at Sensata, I partnered directly with senior executives on multimillion-dollar customer quotes, so I am used to a marketing program that has to hold up in a room with finance and sales leadership, not just marketing.

Multi-channel execution is the other half of the job description, and it is where I started. At Plug Power I ran paid search and social across Google, Microsoft, Meta and LinkedIn alongside organic and SEO work, managing \$100K/month in budgets I built the plans and forecasts for myself. I bring that same channel range, plus the AI-agent automation I now run on Claude at Applied Materials, to a marketing org the size of Visa's, where digital fluency with new tools is explicitly part of the job.
