Hiring Team, Databricks

Your posting asks for someone who can turn a strategic customer's experience into a story, then keep that story current as an enterprise relationship evolves. At Sensata I ran 30+ interviews with OEMs and distributors to find the pain points behind their purchasing decisions, then turned those stories into a positioning narrative that lifted conversion 15% on priority launches.

The part of your listing that stands out is the enterprise stakeholder load: Legal, Communications and account teams all have a say before a customer story goes out. I have run programs inside that exact constraint. At Pixis I hired and managed an 8-person team keeping enterprise case studies and sales materials current across 8 client accounts, supporting a 20% improvement in sales team performance, and reported customer-voice findings to senior management on a weekly cadence rather than waiting for a quarterly readout.

You also ask for experience building and automating AI-enabled tools for the work itself, not just using them. As Strategic Marketing III at Applied Materials, I automate recurring forecasting and reporting with agentic AI workflows built on Claude, the same repeatable-process instinct I would bring to speeding up story development here.

I would want fifteen minutes to walk through how I would scope the first customer story for your Americas account teams. Proof trail at adhi-product-ai.vercel.app/ref/databricks.
