Hiring Team, GitLab

Your posting describes taking a problem from "something looks off in the numbers" to a fix that sticks, writing the policy and getting it adopted in the field. That is the job I built for myself at PriceKeel: I run the company's own CRM, CPQ, forecast and pipeline reviews, and deal approvals, and I built the audit trail that gives Finance evidence for every pricing decision rather than a verbal explanation after the fact.

Before PriceKeel I spent a year inside exactly the forecast-and-bookings problem this role owns. At Sensata I shipped the Bleeders and Leakers Power BI dashboard, tracking 1,200 opportunities against a \$627M target by win rate, average dollar per win and stage distribution, and used it to recover \$700K in margin in two quarters and raise distributor margins from 53% to 61%. That is the same discipline your forecast-variance and bookings-policy work asks for: find the root cause in the data, fix the process, not just the number.

Your team expects AI as a daily productivity habit, not a stated value. As Strategic Marketing III at Applied Materials, I automate recurring forecasting and reporting with agentic AI workflows built on Claude while still carrying the P&L and revenue targets the automation feeds into.

I would want fifteen minutes to walk through how I would scope the first forecast-variance review for your Sales Strategy and Operations team. Proof trail at adhithyabhaskar.vercel.app/ref/gitlab.
