Hiring Team, Sierra

At Sensata, I built the Bleeders and Leakers Power BI dashboard from scratch: 1,200 opportunities tracked against a $627M target across 3 regions and 20 product lines, with win rate, dollars per win and stage distribution broken out by salesperson. Your posting asks for that same operating cadence for Agent Development: pipeline, deployment and utilization visibility running at the same standard your Sales organization already holds itself to. Standing that up from the ground, not just reporting on it after the fact, is the work I want to do.

I'd start the way I started PriceKeel: build the thing instead of asking for headcount to track it in a spreadsheet. I built its CRM, CPQ, forecast and pipeline review cadence and the deal-approval audit trail Finance checks before anything closes, using the company's own closed-won and closed-lost deals to train the discount guardrail underneath it. Automating that kind of analysis is also how I already work at Applied Materials, where I run AI agents built on Claude on the repetitive parts of revenue analysis. Pointing that same habit at Claude Code, Cursor or Codex to build Agent Dev's internal tooling is not a stretch for me, it is the next version of something I already do.

Account expansion is the other half of the req, and in my experience it gets won in the pricing conversation as much as in the renewal call. At Sensata I repriced parts sold through distribution and raised distributor and channel-partner margins from 53% to 61% in under two quarters, then built the AP26 revenue models and multimillion-dollar customer quotes senior executives used to defend that gain. That is the same instinct this role needs for turning post-sale deployment data into whitespace and expansion decisions instead of status updates.

One opinion I'll offer before you ask: a strategy-and-operations partner who can't read the underlying dataset is a note-taker with a nicer deck. I'd rather pull the pipeline and utilization numbers myself, build the tool that keeps pulling them, and show up to the business review with the recommendation already attached.
