Hiring Team, Pocketful

Your posting pairs two things most strategy-and-ops roles keep separate: owning the KPI reporting and business-performance layer, and building the AI-enabled processes that make that reporting faster. That pairing is the exact shape of what I do now at Applied Materials, where I carry P&L and revenue targets, run the OKR cadence of weekly and quarterly business reviews, and automate the repetitive half of that analysis with AI agents built on Claude so research and decision time go further instead of into another dashboard.

At PriceKeel, the company I founded, I am the entire org chart for the initiative: I identified a governance gap in B2B SaaS deal pricing, built the business case, guardrail engine and audit trail that close it, and now run the CRM and CPQ, forecast and pipeline reviews, and deal approvals myself while raising the company's first round and researching competitive and buyer benchmarks for the next move. That is close to the mandate in this posting: take an ambiguous business problem end to end, from research to a recommendation a CEO can act on.

Before PriceKeel, I built that same muscle inside a much bigger business. At Sensata I headed the Bleeders and Leakers margin program end to end: designed a dashboard that turned 1,200 scattered pricing opportunities against a $627M target into one tracked system across 3 regions, then closed $700K+ of that gap in 2 quarters through negotiations with Sales and Finance I had no formal authority to compel. I was promoted to Pricing Lead in 10 months and went on to partner directly with senior executives on AP26 revenue models and site-transition strategy, the kind of ambiguous, leadership-level problem that gets handed to whoever can actually move it.

On the people and cross-functional side, I have hired and managed teams once an initiative earned them: an 8-person account team at Pixis, cutting churn 50% through the account strategy I designed, and the marketing team at Plug Power while owning $100K/month budgets across multiple business units and building the plans leadership had to approve. I have also sat in the liaison seat with no formal authority at all, between regional, localization and analytics teams at GenY Medium, and led a 5-consultant team through a market-sizing study for Safran, narrowing 170 facilities to a target list of 28. Research the problem, build the system that tracks it, then get the right people and processes around it: that is the shape of every role on this resume, and I would like it to be the shape of Pocketful's CEO's office too. Proof trail is here: adhithyabhaskar.vercel.app/ref/pocketful
