Hiring Team, OpenAI

Your posting draws a clean line between running ads and building the web and organic engine that gets SMB advertisers to discover the platform in the first place. That is the half of growth I have actually built from zero. At Plug Power I rebuilt the website's lead flow into Pardot and raised organic search visibility 35% by closing keyword-strategy gaps, then used customer research to reshape landing-page messaging and navigation, lifting conversion 20% and cutting CPA 15%. That is the exact chain this role owns: discovery through search and content, then a tested path from first visit to signup.

I also build the web analytics and experimentation layer underneath that chain, not just the campaigns on top of it. At Sensata I built KPI frameworks in SQL and GA4 across 50K+ connected devices to surface high-intent cohorts and conversion barriers, and at GenY Medium I ran SEO site audits across backlinks, keywords, internal linking and content that lifted a B2B startup's conversion rate 36%. When I needed a funnel of my own, I shipped one: SwipeHire is an AI job-matching platform I built zero to one on the OpenAI API, where I owned the GA4-instrumented funnel myself and ran 8+ A/B tests that lifted activation 25%. I know what it takes to turn "qualified traffic" into a number that holds up under a cohort query, because I have had to defend that number myself.

The AI-acceleration piece is not new to me either. I automate recurring research and reporting with Claude agents as Strategic Marketing III at Applied Materials today, which is the same build-test-read loop this posting asks for applied to web experiments instead of market models. I would welcome 15 minutes to walk through where that applies first to the SMB Ads web roadmap. Proof trail at adhi-growth-ai.vercel.app/ref/openai.
