

PITCH DECK | OPENAI GROWTH MARKETING MANAGER, WEB & ORGANIC, SMB ADS

# Before an SMB advertiser ever sees an ad console, they find you through search, content and a web page. I have built and rebuilt that exact discovery path three times.

*Organic search, web experimentation and conversion instrumentation, proven on a self-serve web funnel I built myself.*

35% organic search visibility gain at Plug Power, zero added paid spend

50% cost per lead cut by rebuilding the web-to-CRM lead flow

20% conversion lift from landing-page and navigation testing

Built a **self-serve funnel zero to one** on the OpenAI API

Runs **Claude AI agents** for research and workflow automation today

# This req is not a paid-media seat. It is a web strategy and experimentation roadmap, and the strongest proof for it is a funnel someone has already owned end to end.

## What the role actually asks for

Own the SMB Ads web strategy and experimentation roadmap: grow qualified discovery through search, content and generative engine optimization, then improve the path from first visit to signup and activation.

Analyze journeys, funnels and cohorts to find conversion barriers, and run tests across landing pages, messaging, navigation, personalization and offers.

Define instrumentation, test design and attribution with Data Science and marketing systems, and use AI to accelerate research, prototyping, content and experimentation.

## What I have already run

At **Plug Power**, I raised **organic search visibility 35%** and rebuilt the web-to-CRM lead flow, cutting **cost per lead 50%**, then ran landing-page and navigation tests that lifted conversion **20%**.

At **Sensata**, I built **SQL and GA4 cohort frameworks** across 50K+ devices to find conversion barriers, the same journey-and-funnel analysis this role runs daily.

On **SwipeHire**, I built the GA4-instrumented funnel myself on the **OpenAI API**, and I automate research with **Claude agents** at Applied Materials today.

The AI-accelerated experimentation this posting asks for is not a new habit for me. I already build on the OpenAI API and run AI agents daily to move from research to a shipped test faster.

# What the Web & Organic Growth opening asks for, and where the proof sits.

## What the role covers

- "Grow organic discovery through search, content, and GEO... test new ways to help businesses find and evaluate OpenAI's advertising offering."*
- "Analyze journeys, funnels, and cohorts to identify conversion barriers and prioritize high-impact improvements."*
- "Run experiments across landing pages, messaging, navigation, personalization, offers, and conversion flows."*

## My Proof

- Organic discovery, raised without paid spend:** closed keyword-strategy gaps and built SEO partnerships that raised organic search visibility 35% at Plug Power.
- Funnel and cohort analysis:** SQL and GA4 KPI frameworks across 50K+ connected devices at Sensata, surfacing high-intent cohorts and conversion barriers that lifted feature adoption 18%.
- Landing-page, messaging and navigation testing:** customer research reshaped Plug Power's landing pages and site navigation, lifting conversion 20% and cutting CPA 15%.
- Instrumentation and attribution:** wired the Mar-Tech stack (Salesforce, Adobe Analytics, GA, Google Tag Manager) into closed-loop attribution across every test.

# One web funnel I rebuilt for an existing business, and one I built myself, zero to one.

At Plug Power, I owned the full chain from organic discovery to lead: closing keyword gaps, rebuilding the WordPress-to-Pardot lead flow, and running the customer research behind every landing-page and navigation test.

On SwipeHire, I built the other half myself: an AI job-matching platform on the OpenAI API where I owned the GA4-instrumented funnel and event tracking from first visit through signup, and ran 8+ A/B tests and 12+ user interviews that lifted activation 25%.

# What the first month on the SMB Ads web and organic roadmap looks like.

WEEK 1

**Read the current journey**

Sit with Data Science and marketing systems to map the journey from first visit through signup and first campaign, and find where cohorts drop off against search and content sources.

-----

**Why first:** the same move behind the Plug Power lead-flow rebuild: read the current funnel before changing it.

WEEK 2-3

**Ship the first organic and web test wave**

Launch landing-page, messaging and navigation tests against the sharpest drop-off, using AI tools to prototype content and creative variants fast alongside Content and Design.

-----

**Why now:** the same test-and-read loop that lifted conversion 20% at Plug Power and activation 25% on SwipeHire.

WEEK 4

**Wire instrumentation and attribution**

Define test design and attribution with Data Science and Ads Engineering so every experiment reports back into one closed-loop view, not a one-off readout.

-----

**Why this fast:** the same Mar-Tech wiring that made every Plug Power test measurable on its own.

CLOSE

# You are hiring someone to build the web and organic engine for a zero-to-one SMB advertiser motion. I have rebuilt that exact engine, and I have built one from nothing.

The core proof is Plug Power: **organic search visibility up 35%**, a rebuilt web-to-CRM lead flow that cut **cost per lead 50%**, and landing-page and navigation tests that lifted conversion **20%**.

What is harder to find is someone who has also **built a self-serve funnel from zero on the OpenAI API** and runs **Claude AI agents** for research and workflow automation today, which means the AI-accelerated execution this posting asks for is a current habit, not a claim.
