Hiring Team, Thumbtack

I have already built the exact shape of marketplace this role sits inside. SwipeHire, an AI job-matching product I shipped zero to one on the OpenAI API, connects two sides the same way Thumbtack connects homeowners and pros: I wrote the PRD, scoped the MVP, then ran 8+ A/B tests and 12+ user interviews to decide what to build, cut, or double down on, before activation moved 25%. That is the loop your posting describes as "seed to scale," and it is the one I actually run.

I ran a version of that same loop as a day job, not a side project. At Sensata I owned the product roadmap for sensor solutions across automotive and industrial segments, carrying a 100+ feature backlog with Engineering in Agile across 3 regions, getting releases out 25% faster and cutting time-to-market 20%. Thirty-plus customer interviews with OEMs and distributors told me exactly where the product was falling short before I touched the backlog, the same user-centric read a two-sided marketplace needs on both the pro and the customer side, and that signal lifted CSAT 22%.

I currently carry forecasting and value-based pricing models as Strategic Marketing III at Applied Materials, where I automate the repetitive side of that analysis with Claude AI agents so the team's time goes to the judgment calls, not the data pulls. Your posting names "discerning judgment of AI" as a requirement rather than a buzzword, and that is the habit I bring to it.

I would like to put that build, measure, decide discipline to work on Pro Fulfillment. Proof trail at adhi-product-ai.vercel.app/ref/thumbtack.
