Hiring Team, Pendo

At Sensata I took a lineup of new sensing products that shipped with specs sheets, not a story, and built the GTM and positioning that turned them into a buyer-facing narrative account teams could actually sell: \$2M plus in first-year revenue and a 15% lift in conversion on the launches where the message landed hardest. That is the same translation work your posting describes, turning product capability into an enterprise-facing narrative, and it is work I have already shipped, not a skill I am picking up for this application.

Packaging is a team sport in your posting, and it has been one in mine. At Sensata I built sales enablement, presentations and case studies for more than 50 reps carrying live enterprise deals, win rates moved 30%, and I sat in the room negotiating multimillion-dollar customer quotes alongside the account executives. At Applied Materials today I size markets with Sales, Engineering and Accounts together so packaging and pricing start from one shared view instead of three teams arguing from three different ones. That cross-functional habit, not a solo positioning doc, is how I have always worked.

Market research and competitive analysis are not a slide I build once and reuse. I ran 30-plus customer interviews with OEMs and distributors at Sensata to test and iterate messaging before it shipped, and I tracked competitor moves across EMEA and the US the same way, quarter over quarter. On the AI fluency your posting names directly: I automate the repetitive parts of my own forecasting and reporting work at Applied Materials with agents built on Claude, not as a demo, because rebuilding the same analysis every cycle wastes time that should go to the next test.

Pendo's whole pitch to customers is that product usage data should drive the roadmap conversation, which means your product marketing has to carry more technical credibility than most PMM seats need. That is the enterprise-narrative work I want to keep doing next. Proof trail at adhi-product-ai.vercel.app/ref/pendo.
