

PITCH DECK | PENDO SR. PRODUCT MARKETING MANAGER

Pendo sells the idea that usage data, not opinion, should drive the roadmap. That is a harder story to tell an enterprise buyer than a feature list, and it is the exact translation work I have already been doing.

Enterprise solutions messaging, packaging built with Product and Sales instead of handed to them, and the AI fluency that keeps the content pipeline moving as fast as the deals do.

\$2M+ first-year revenue on a positioning and GTM story I built from technical specs at Sensata

+30% win rate from enterprise sales enablement built for 50+ reps

30+ OEM/distributor interviews used to test and iterate messaging before launch

AI agents built on Claude automating my own recurring analysis at Applied Materials

Market sizing with Sales, Engineering and Accounts so packaging starts from one shared view

The role is not "write the messaging." It is turning technical product depth into **a narrative three different teams can sell the same way.**

What that actually requires

An enterprise buyer does not evaluate a feature list. They need product capability translated into a buyer-focused narrative that survives a procurement review, not just a demo.

Product, Sales and Marketing each package an offering differently unless someone owns the translation between them, and that ownership has to hold across presentations, case studies and white papers at once.

AI has to be load-bearing in how that content ships, not a line in a tools list, because an ambiguous, fast-moving environment does not wait for a slow content cycle.

What I have already run

At **Sensata**, I turned new sensing products into a GTM and positioning story that non-technical buyers could act on, driving \$2M+ in first-year revenue.

At **Sensata** again, I built the sales enablement, presentations and case studies that carried 50+ reps through live enterprise deals, and win rates moved 30%.

At **Applied Materials** today, I automate my own recurring market-sizing and forecasting work with AI agents built on Claude, the exact fluency this posting names by name.

The through-line: every narrative I have shipped had to survive contact with Sales, Engineering and a skeptical enterprise buyer at the same time, and I have already made AI part of how that content gets produced, not a slide about AI.

What the posting asks for, and where the proof already sits.

What the role covers

"Owning enterprise solutions messaging and translating product capabilities into buyer-focused narratives."

"Partnering with Product, Sales, and Marketing teams to package offerings."

"AI fluency, including comfort working in an AI-shaped environment, and using AI tools."

My proof

Sensata, GTM to \$2M+ revenue: owned positioning and messaging for new sensing products across North America and Europe, translating technical specs into buyer-focused narratives that drove first-year revenue and a 15% lift in conversion.

Applied Materials, market sizing across teams: sized the semiconductor market with Sales, Engineering and Accounts together, so packaging and pricing start from one shared view instead of three competing ones.

Applied Materials, AI agents on Claude: automated my own recurring forecasting and market-sizing analysis, the same "AI fluency" and "AI-shaped environment" language this posting uses.

Sensata, 30+ customer interviews: tested and iterated messaging with OEMs and distributors before it shipped, then tracked competitor moves across EMEA and the US the same way.

Own the narrative, arm the sellers, then **keep testing the message against the market.**

Same pattern across two Sensata roles: translate the technical story, put it in the hands of the people carrying deals, then measure whether it actually moved a number.

\$2M+

First-Year Revenue, New Sensing Products

GTM, positioning and messaging built from technical specs for buyers across North America and Europe, plus a 15% conversion lift on priority launches.

+30% Win Rate

Enterprise Sales Enablement

Presentations, case studies and sales decks built for 50+ reps carrying live enterprise deals, backed with direct product expertise.

30+ Interviews

Message Testing With OEMs and Distributors

Structured interviews that tested and iterated messaging before it shipped, lifting CSAT 22% on the accounts that gave feedback.

The common thread: none of these were a positioning doc that sat in a folder. Each one closed the loop from message to a number Sales or the customer was accountable for.

What the first month owning Pendo's enterprise narrative looks like.

WEEK 1

Pressure-test the current narrative

Sit with Product, Sales and the CS team that lives inside product usage data every day, and map where the current enterprise story does and does not survive a procurement conversation. Pull the last 10-15 lost enterprise deals for pattern signal.

Why first: the same first move behind the Sensata GTM work, listening to where the message breaks before rewriting it.

WEEK 2-3

Rebuild one packaging story with Product and Sales

Pick the offering where technical capability and buyer-facing narrative sit furthest apart, and rebuild its positioning, presentations and case study together with the teams that will actually sell it, not for them.

Why now: the same cross-functional build that moved Sensata's win rate 30% instead of shipping a deck no one used.

WEEK 4

Stand up the AI-assisted content loop

Build the first agent or automation that removes a manual step from turning competitive research or customer interviews into enterprise-facing content, and run it against a live piece of collateral so the win is measured.

Why this fast: the same habit that keeps my own reporting moving at Applied Materials today, not a plan for someday.

CLOSE

You are hiring someone to turn technical product depth into a narrative Product, Sales and Marketing can all sell the same way. I have already run that pattern, twice, at Sensata.

The core proof is one Sensata arc: **\$2M+ first-year revenue** from GTM and positioning built out of technical specs, then **+30% win rate** once that story was armed with sales enablement for 50+ reps carrying live deals.

What is harder to find is someone who has already made AI load-bearing in their own analysis, not a line item. At Applied Materials I automate my own market-sizing and forecasting work with agents built on Claude, because rebuilding the same report every cycle is time that should go into the next piece of enterprise content.
