

PITCH DECK | NSCALE US PRODUCT MARKETING MANAGER

Nscale's PMM role is really a translation job: turn a sovereign AI cloud platform's technical depth into launches, positioning and sales enablement a buyer and a rep can actually use. I have run that translation before, on infrastructure buyers who ask harder questions than most.

A full GTM launch built to a revenue number, and the sales enablement that kept 50+ reps selling it correctly.

\$2M+ first-year revenue from a full positioning-to-launch GTM at Sensata

+30% win rate from sales enablement built for 50+ reps

30+ customer interviews that kept messaging tied to real buyers

AI agents built on Claude automating recurring market research at Applied Materials

+8% market share from competitive-intelligence-driven positioning

A hands-on PMM role at an infrastructure company is not "write the launch deck." It is making a technical buyer trust the story before they trust the product.

What that actually requires

Positioning and messaging that survives contact with a technical buyer, not marketing language that sounds good in a review and falls apart in a sales call.

Sales enablement, decks, battlecards, FAQs, talk tracks, that a rep can pick up cold and use correctly on a call the same day.

Competitive and market research that stays current enough to inform the next launch, not a quarterly snapshot nobody opens.

What I have already run

At **Sensata**, I owned positioning, messaging and launch execution for new sensing products sold to OEM and distributor engineers, not a soft consumer audience.

I built the **sales enablement** (decks, case studies, talk tracks) for 50+ reps carrying live deals, and tested every message against 30+ real customer interviews first.

At **Applied Materials** today, I automate recurring market and competitive research with AI agents built on Claude, freeing hours for the writing a launch actually needs.

The through-line: every launch I have shipped was tested against a real technical buyer before the enablement materials went out, not after.

What the posting asks for, and where the proof already sits.

What the role covers

- "Support product positioning and messaging development for key Nscale products, services, and launches."
- "Create and maintain core sales enablement materials, including pitch decks, one-pagers, battlecards, FAQs, and talk tracks."
- "Conduct market, competitor, and customer research and synthesize findings into actionable insights."

My proof

- Sensata, positioning to \$2M+ revenue:** owned positioning, messaging, channel and launch execution end to end for new sensing products across North America and Europe.
- Sensata, sales enablement for 50+ reps:** built decks, case studies and talk tracks that moved win rates 30% on live deals.
- Sensata, competitive intelligence:** tracked competitor moves and market share across EMEA and the US, driving +12% YoY revenue and +8% market share through price-realignment positioning.
- Applied Materials, research synthesis at speed:** size the semiconductor market with Sales, Engineering and Accounts, then automate the repeat analysis with Claude agents.

Ship the launch, arm the reps, then **keep the competitive picture current enough to inform the next one.**

Same pattern across two technical categories, semiconductors and industrial sensing: ship the positioning, build the enablement under it, then measure whether it moved a number Sales was accountable for.

\$2M+

First-Year Revenue, End-to-End GTM

Positioning, messaging, channel strategy and launch execution built and shipped in one motion for new sensing products across North America and Europe.

+30% Win Rate

Sales Enablement for 50+ Reps

Decks, case studies and talk tracks built for reps carrying live, technical deals, not generic marketing collateral.

+8% Market Share

Competitive-Intelligence-Driven Positioning

Price-realignment positioning built on competitive benchmarking across 10+ players, tracked across EMEA and the US.

The common thread: none of these were a positioning doc that sat in a folder. Each one closed the loop from message to a number Sales was accountable for.

What the first month supporting launches and enablement at Nscale looks like.

WEEK 1

Audit the current messaging and enablement set

Read every live battlecard, one-pager and FAQ against the current product roadmap, and sit in on Sales and SME conversations to find where the technical story and the sales story have already drifted apart.

Why first: the same first move behind every Sensata launch, find where the message breaks before rewriting it.

WEEK 2-3

Rebuild one launch's positioning and enablement

Pick the next major launch or roadmap update, translate its technical capabilities into a value proposition and use cases with Product and Engineering, then ship the sales deck, one-pager and talk track together with Sales.

Why now: the same cross-functional build that moved Sensata's win rate 30% instead of a deck Sales never opened.

WEEK 4

Stand up the competitive-intelligence cadence

Institute the direct-research discipline behind Sensata's 30+ customer interviews, applied to Nscale's buyers and competitors, then automate the repeat tracking so the intelligence stays current every cycle, not once a quarter.

Why this fast: the same Claude-agent habit that keeps my own market research moving at Applied Materials today, not a plan for someday.

CLOSE

You are hiring someone to translate a sovereign AI cloud platform into launches, positioning and sales enablement a buyer and a rep can use. I have already run that translation on technical buyers, and put a number on each result.

The launch half: **\$2M+ first-year revenue** from positioning, messaging, channel and launch execution built end to end at Sensata, backed by competitive intelligence that drove +8% market share.

The enablement half: sales decks, case studies and talk tracks for 50+ reps that moved **win rates 30%**, tested first against 30+ real customer interviews. At Applied Materials I now automate my own recurring market research with agents built on Claude, because rebuilding the same report every cycle is time that should go into the next launch.
