Hiring Team, Brex

Your posting draws a clean line I do not see often: Meta as the core acquisition engine, with a mandate to engineer signal architecture and build a testing framework, not just run campaigns. At Pixis I owned that exact scope for a fashion brand, shopping feed cleanup, smart bidding, creative refresh and lookalike expansion, and turned it into 3x ROAS in a single month. That was not one lever. It was the full stack you are describing.

The signal and measurement half of the role is where I have spent the most repetitive hours, and I have already automated a version of it. At Plug Power I rebuilt the WordPress to Pardot lead flow and closed the loop across Salesforce, Adobe Analytics and Google Tag Manager, cutting cost per lead 50% without adding spend, while running Paid Search and Paid Social across Google, Microsoft, Meta and LinkedIn on \$100K a month and cutting CPA 25% through structured, hypothesis driven testing. At Pixis I used Amplitude and Tableau across 30+ campaigns to lift blended ROAS 40%, work that came directly from first-party audience and cohort analysis, the same inputs your posting names as the backbone of a lookalike and retargeting program.

What I read in "connect performance to pipeline" is a company that does not want a media buyer, it wants someone who will sit with Analytics and Marketing Ops and defend a CAC number to the people who own the revenue line. I have carried that accountability directly: P&L and revenue targets on an 8-client, \$15K to \$90K per client portfolio at Pixis, and the same ownership again on multi-business-unit budgets at Plug Power. I also automate my own recurring forecasting at Applied Materials with AI agents built on Claude, which is the instinct I would bring to your testing cadence: fewer manual reporting cycles, more time on the audience and creative calls that actually move CAC.

I would like to bring the Meta ownership from Pixis and the full-funnel testing discipline from Plug Power to Brex's paid social engine. Proof trail at adhi-growth-ai.vercel.app/ref/brex.
