Hiring Team, Perplexity

I founded PriceKeel from a blank page: a decision-integrity layer for B2B SaaS deal pricing that reads a live discount exception inside the deal platform and recommends an explainable guardrail learned from each company's own closed-won and closed-lost deals. I wrote the spec, built the audit trail Finance now uses as evidence, and I run the company's CRM/CPQ, pipeline reviews and deal approvals myself in a team small enough that initiative is the whole job. That is the zero-to-one, no-safety-net version of what your posting is asking for: a PM who can envision a new experience in an enterprise industry, then actually ship it.

Your posting asks candidates to name the industry they are most interested in innovating. Mine is pricing and RevOps tooling for enterprise B2B SaaS: the discount approvals, CPQ configuration and deal-desk workflows that still run on spreadsheets and gut calls inside most sales organizations. I know that workflow from both sides. I run it end to end at PriceKeel, and I ran Sensata's pricing program, where I recovered $700K+ in margin in two quarters and built the Power BI model that ranked 1,200 pricing opportunities against a $627M target.

The other build on my resume is SwipeHire, an AI job-matching platform I took from PRD to 50+ users, running 8+ A/B tests on the activation loop that lifted first-session activation 25%. That is the data-driven flywheel your posting describes: use the data to steer the product, not just report on it. At Applied Materials I run a version of the same loop today with Claude agents that steer repetitive forecasting analysis toward the highest-value output, so working with a nondeterministic system to find the high-value outcome is already how I spend my week.

Computer is asking people to trust an agent with real decisions. Pricing and RevOps tooling is the same trust problem in a different industry's clothes, and it is the one I have already spent two companies building for. I would like to bring that into Computer's core experience next. Proof trail at adhi-product-ai.vercel.app/ref/perplexity.
