Hiring Team, Turing

Your posting asks for someone who can turn dense technical capability into positioning and sales enablement that a skeptical technical buyer will actually act on. At Sensata, I owned the go-to-market for a new line of sensing products sold to OEM and distributor engineers, and the hard part was never the feature list. It was translating multi-page technical specs into a buyer-ready story, then proving it in front of the people writing the check. That launch drove \$2M+ in first-year revenue and a 15% lift in conversion.

The same pattern shows up in how I built for your buyer profile without ever meeting them. I ran 30+ structured interviews with OEM and distributor engineers to pressure-test messaging before it shipped, the same discipline your team needs to keep positioning honest with AI researchers and ML engineers who can tell the difference between a claim and a benchmark. Once the story held up, I armed 50+ reps with the decks and case studies that moved win rates 30%, and built the competitive intelligence that kept both product and pricing decisions grounded in what the market was actually doing.

At Applied Materials today, I partner with Sales, Engineering and Accounts to size a fast-moving market from technical and field data, and I automate the recurring parts of that analysis with AI agents built on Claude rather than rebuilding the same report every cycle. That habit, using AI as a working tool inside my own process rather than a topic I write about, is the same fluency a team selling datasets and RL environments to frontier AI labs needs from its product marketer.

What I would bring to Turing's Frontier AI business is someone who has already run the full loop, positioning built from real technical depth, tested against the actual buyer, armed for the sellers, and measured against a revenue number, not left as a deck in a folder. Proof trail at adhi-product-ai.vercel.app/ref/turing.
