

PITCH DECK | TURING SENIOR PRODUCT MARKETING MANAGER

Turing sells datasets, benchmarks and RL environments to buyers who can read a technical spec better than most marketers can write one. That is exactly the translation work I have already been doing, on a harder audience than most PMMs ever face.

Positioning built from real technical depth, tested against skeptical engineers before it ships, then armed for the sellers carrying the deal.

\$2M+ first-year revenue on a GTM story built from technical specs at Sensata

+30% win rate from sales enablement built for 50+ reps

30+ engineer interviews used to test and iterate messaging before launch

AI agents built on Claude automating my own recurring analysis at Applied Materials

Market sizing with Sales, Engineering and Accounts so positioning starts from one shared view

The role is not "write the positioning." It is turning a highly technical product line into a narrative a frontier AI lab's own researchers will trust.

What that actually requires

An ML engineer does not buy a feature list. Positioning for datasets, benchmarks and RL environments has to survive a technical reviewer who already knows the domain cold, not just a procurement conversation.

Customer research and competitive analysis with a technical buyer only work when the marketer can hold a real conversation about the product, not translate secondhand from a spec sheet.

Sales enablement and technical content need to be produced fast, in an environment where the underlying product itself moves every few weeks.

What I have already run

At **Sensata**, I turned deeply technical specs for new sensing products into a GTM and positioning story that OEM and distributor engineers acted on, driving \$2M+ in first-year revenue.

At **Sensata** again, I built the sales enablement, presentations and case studies that carried 50+ reps through live technical deals, and win rates moved 30%.

At **Applied Materials** today, I automate my own recurring market-sizing and forecasting work with AI agents built on Claude, the same AI fluency a Frontier AI product line runs on.

The through-line: every narrative I have shipped had to survive contact with an engineer who knew more about the product than I did on day one, and I have already made AI part of how that content gets produced, not a slide about AI.

What the posting asks for, and where the proof already sits.

What the role covers

"Develop positioning and messaging for datasets, benchmarks, and RL environments."

"Conduct customer research and competitive analysis with frontier AI labs."

"Create sales enablement materials and technical content."

My proof

Sensata, GTM to \$2M+ revenue: owned positioning and messaging for new sensing products across North America and Europe, translating deeply technical specs into buyer-ready narratives for OEM and distributor engineers.

Sensata, 30+ engineer interviews: tested and iterated messaging directly with OEM and distributor engineers before it shipped, then tracked competitor moves across EMEA and the US the same way.

Sensata, sales enablement for 50+ reps: built the decks, case studies and technical content that carried live technical deals, moving win rates 30%.

Applied Materials, AI agents on Claude: automated my own recurring market-sizing and competitive analysis, the exact AI fluency a Frontier AI product marketer needs day to day.

Own the narrative, arm the sellers, then **keep testing the message against the toughest buyer in the room.**

Same pattern across two Sensata roles: translate the technical story for a buyer who knows the domain, put it in the hands of the people carrying deals, then measure whether it actually moved a number.

\$2M+

First-Year Revenue, New Sensing Products

GTM, positioning and messaging built from technical specs for OEM and distributor engineers across North America and Europe, plus a 15% conversion lift on priority launches.

+30% Win Rate

Technical Sales Enablement

Presentations, case studies and technical content built for 50+ reps carrying live technical deals, backed with direct product depth.

30+ Interviews

Message Testing With Engineers

Structured interviews with OEM and distributor engineers that tested and iterated messaging before it shipped, lifting CSAT 22% on the accounts that gave feedback.

The common thread: none of these were a positioning doc that sat in a folder. Each one closed the loop from message to a number Sales or the technical buyer was accountable for.

What the first month owning positioning for Turing's Frontier AI business looks like.

WEEK 1

Sit inside the technical buyer conversation

Pull the last 10-15 deals where a frontier AI lab evaluated the datasets, benchmarks or RL environments, and map where the current positioning does and does not survive a technical reviewer's questions.

Why first: the same first move behind the Sensata GTM work, listening to where the message breaks before rewriting it.

WEEK 2-3

Rebuild one product's narrative with the technical team

Pick the dataset, benchmark or RL environment where technical depth and buyer-facing narrative sit furthest apart, and rebuild its positioning and sales enablement together with the researchers and engineers who built it.

Why now: the same cross-functional build that moved Sensata's win rate 30% instead of shipping a deck no one used.

WEEK 4

Stand up the AI-assisted content loop

Build the first agent or automation that removes a manual step from turning competitive research or customer interviews into technical content, and run it against a live piece of collateral so the win is measured.

Why this fast: the same habit that keeps my own reporting moving at Applied Materials today, not a plan for someday.

CLOSE

You are hiring someone to make dense technical depth trustworthy to the toughest buyer there is: another engineer. I have already run that pattern, twice, at Sensata.

The core proof is one Sensata arc: **\$2M+ first-year revenue** from GTM and positioning built out of deeply technical specs, then **+30% win rate** once that story was armed with sales enablement for 50+ reps carrying live technical deals.

What is harder to find is someone who has already made AI load-bearing in their own analysis, not a line item. At Applied Materials I automate my own market-sizing and forecasting work with agents built on Claude, because rebuilding the same report every cycle is time that should go into the next piece of technical content.
