Hiring Team, Airwallex

Your posting describes ranking a growth backlog by impact, confidence, effort and strategic fit before a single test gets built. That is close to what I built at PriceKeel: a guardrail engine that scores every pricing exception against a company's own closed-won and closed-lost precedent, so the team can say no to a plausible discount and defend the call with evidence instead of instinct. I also run the CRM, CPQ, forecast reviews and deal approvals behind it, with an audit trail Finance can check on demand, which is the same operational backbone your team is hiring for, just pointed at pricing decisions instead of campaigns.

The measurement half of the role, a tracking taxonomy and dashboards that turn a result into the next iteration, is where I spend most weeks. At Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard: 1,200 pricing opportunities tracked against a \$627M target by win rate, dollar-per-win and stage distribution across 3 regions and 20 product lines. That dashboard surfaced \$433M in margin gaps and let leadership prioritize by salesperson and product line instead of guessing, and it fed straight into a \$700K margin recovery over two quarters. Swap pricing exceptions for experiment variants and campaign IDs and the shape of the work is the same: build the taxonomy, build the dashboard, then use it to decide what runs next.

I also carry the budget side of a role like this. At Plug Power I owned \$100K a month in marketing spend across multiple business units, building the plans and forecasts that leadership approved, and at Applied Materials I build the forecasting models that multiple product groups run their targets against. Partnering with FP&A on a campaign budget and reporting actuals against forecast is a natural extension of both.

I use AI agents built on Claude to automate the repetitive parts of my own analysis work, with a human check before anything goes out, which matches the guardrails your posting asks for. Proof trail at adhi-growth-ai.vercel.app/ref/airwallex.
