Hiring Team, LinkedIn

Your posting asks for someone who can turn pipeline performance into a business outlook leadership can act on, not just a status update. I built that discipline at Sensata, where a Power BI dashboard I designed tracked 1,200 pipeline opportunities against a $627M target, and the win-rate and stage-distribution views inside it surfaced $433M in margin gaps that leadership used to decide where to focus the next quarter.

At PriceKeel, the company I founded, I run the CRM, CPQ and forecast-and-pipeline-health review cadence myself, the same operating rhythm a Planning & Performance Associate keeps for Sales Strategy & Operations: assess the trend, flag the risk or opportunity early, and bring Finance and RevOps a recommendation instead of a problem.

That same muscle shows up at Applied Materials, where I build forecasting and annual-planning models across multiple product groups and have started automating the recurring parts of that reporting cycle with AI agents built on Claude, the kind of AI-enabled process improvement your posting calls out directly. I also know what a dashboard has to survive once Sales is the one reading it: at Sensata I shipped the enablement materials that lifted win rates 30% for 50+ reps, so I build analyses that hold up under questions from the people closest to the pipeline, not just a polished first look from leadership.

I would bring someone who has already run this cadence end to end: built the forecast, flagged the risk, and sat across the table from Sales, Finance and Analytics when the numbers moved. Proof trail at adhithyabhaskar.vercel.app/ref/linkedin.
