Hiring Team, Clario

Your posting asks for someone who can support a product's roadmap and lifecycle from initial planning through launch and retirement, and that is the job I already did at Sensata Technologies: I owned the product roadmap for a line of sensor solutions end to end, managing a 100+ feature backlog with Engineering in Agile across 3 regions, which cut time-to-market 20% and sped up releases 25%. That is the same planning-to-launch discipline your Technical Product Development team is describing for this Associate Product Manager seat.

Roadmap priorities are only as good as the research behind them. I ran 30+ customer interviews with OEMs and distributors to find where a product was not meeting the job, then built the SQL and GA4 KPI frameworks that turned 50K+ connected devices into adoption signals, work that raised CSAT 22% and lifted feature adoption 18%. Clario's call for market research, competitive trends and customer feedback gathering is the same job on a different customer base.

Coordinating a launch across Engineering, Operations, Marketing and Sales is familiar territory, and I have done it inside industries where a quality-and-regulatory-process gate sits in front of every release: at Sensata and now at Applied Materials, a roadmap decision does not reach a customer until it clears that gate. I also built the sales enablement decks, case studies and training materials that got 50+ reps ready for a launch, the stakeholder-communication half of this role.

I like building toward evidence instead of opinion, in pricing and in product. Proof trail at adhi-product.vercel.app/ref/clario. I would welcome a conversation about which part of Clario's portfolio, planning, launch or retirement, you would want an Associate Product Manager to own first.
