Hiring Team, LinkedIn

Your posting says the person in this seat is accountable for one thing above all: whether the agent actually works for members. I already built that accountability loop with SwipeHire, an AI job-matching agent I shipped zero-to-one on the OpenAI API. I wrote the PRD, scoped the MVP, then ran 8+ A/B tests and 12+ user interviews to decide what to build, cut, or double down on, the same hill-climbing cycle your posting describes, before activation moved 25%.

I ran that same build, measure, decide loop as a day job at Sensata. 30+ customer interviews with OEMs and distributors became a roadmap call and a product fix that raised CSAT 22%, and a KPI framework I built in SQL and GA4 across 50,000+ connected devices told me which changes actually moved the metrics that mattered, not just the ones that looked good in a deck. Managing a 100+ feature backlog with engineering in Agile across 3 regions got releases out 25% faster.

I currently carry forecasting and value-based pricing models as Strategic Marketing III at Applied Materials, where I automate the repetitive side of that analysis with Claude AI agents so more time goes to the judgment calls, the same prototype-with-new-models habit a weekly-ship agent product needs to keep moving.

I would like to bring that ship-it-and-read-the-data discipline to the Career Agents team. Proof trail at adhi-product-ai.vercel.app/ref/linkedin.
