Hiring Team, Snorkel AI

Your posting asks for someone who can run a competitive intelligence function, not just read one secondhand off a dashboard. At Sensata I built that function myself: benchmarking across 10+ key players, feeding a 12% YoY price realignment, while tracking competitor moves across EMEA and the US to keep positioning current against a moving market. That is the muscle this role needs pointed at frontier accounts instead of industrial distributors.

The other half of your req is translating something technical into a story three different audiences can use: research, technical buyer and business buyer. I did that at Sensata by turning sensor-level specs into OEM and distributor value props on a launch that drove $2M+ first-year revenue, then armed 50+ reps with the battlecards and case studies to sell it, lifting win rates 30%. Underneath that was 30+ structured interviews with OEMs and distributors to pressure-test the message before it ever shipped, the same direct-contact discipline your posting wants from someone building sales plays for research and evals buyers.

I also market inside AI-native products directly, not adjacent to them. I shipped an AI job-matching platform (SwipeHire, OpenAI API) zero-to-one, owning positioning and GTM with no playbook to inherit, and ran customer-facing marketing at Pixis, an AI ad platform. At Applied Materials today I automate my own competitive and market intelligence work with AI agents built on Claude instead of rebuilding the same report every cycle, the kind of AI-in-your-own-workflow habit your bonus line is looking for.

I would like to put this to work on Snorkel's frontier lab business specifically. Proof trail at adhi-product-ai.vercel.app/ref/snorkel-ai.
