Hiring Team, Fictiv

Your posting asks for someone who treats PLM, ERP, TMS and MRP as one systems landscape to own, not a list of acronyms to support. That is the job I already do. At Sensata I designed the FY2026 Bleeders and Leakers Power BI dashboard, a business-systems view of 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, so leadership could see $433M in margin gaps and decide where to invest. That is the same muscle this role needs: turning a sprawling technical landscape into one view leadership can actually act on.

I also know what it looks like from the OEM and distributor side of the table. I ran 30+ structured interviews with OEMs and distributors to find where their manufacturing workflows and supply chain handoffs actually broke, then fed those fixes back into the product, lifting CSAT 22%. I owned the roadmap and a 100+ feature backlog for sensor solutions across 3 regions, working with engineering in Agile, which cut time-to-market 20%. That is the roadmap-execution half of this role. I would bring the same habit to scoping PLM/ERP investments here: talk to the people running the process daily, then verify the fix against the data before it ships.

The build-it-yourself half I already run at PriceKeel, where I set up the CRM, CPQ, forecast and pipeline reviews, and deal approvals from scratch, and built the audit trail that gives Finance evidence to approve a pricing decision. That is a system with real interdependencies, built from requirements through implementation to go-live, and I am the one who owns it when it breaks.

I would welcome 15 minutes to talk through how this maps to the manufacturing business systems roadmap at Fictiv and MISUMI Americas. Proof trail at adhi-product.vercel.app/ref/fictiv.
