Hiring Team, ID.me

Your posting flags consumption-based pricing as the reason this role needs real judgment, not just approval routing: usage tiers, ramp schedules and minimum commitments that do not fit a standard template. I built the Power BI dashboard at Sensata that governed exactly that kind of exception at scale, 1,200 pricing cases against a $627M target across 3 regions, 4 product families and 20 product lines, surfacing $433M in margin gaps so leadership knew which deals to prioritize and which to push back on. Reviewing a non-standard structure and deciding where the line sits is work I have done for two years, not a skill I am picking up for this req.

The CRM side of the role is not new either. I set up and run PriceKeel's own CRM and CPQ, including the deal approval workflow and the audit trail Finance can review for every pricing decision, because the product itself is a deal desk guardrail engine for B2B SaaS pricing exceptions. Before that, at Plug Power I owned the Salesforce-centered Mar-Tech stack end to end for closed-loop reporting. Pipeline hygiene and clean fields are not abstractions to me; they are what makes a deal desk's recommendations defensible to Sales, Legal and Finance at the same time.

Being the go-to resource for reps without becoming a bottleneck is a different skill, and I have built it on the training side: the sales enablement materials I created at Sensata for 50+ reps lifted win rates 30%, and I ran the onboarding conversations that came with it. I also partnered directly with senior executives on AP26 revenue models and multimillion-dollar customer quotes, so I am used to the FP&A side of a deal desk conversation, not just the Salesforce side.

I am Strategic Marketing III at Applied Materials now, where I automate deal and market analysis with AI agents built on Claude rather than rebuilding the same model by hand every cycle, the instinct a Revenue Operations seat scaling its process should want. Proof trail at adhi-pricing-ai.vercel.app/ref/id-me.
