Hiring Team, Darwinbox

The Bleeders and Leakers program I ran at Sensata started as a vague mandate: margin was leaking somewhere across a \$627M business and nobody owned finding it. I built the dashboard that turned 1,200 scattered pricing opportunities into a \$433M shortlist prioritized by salesperson and product line, then negotiated \$700K plus of it back into margin in two quarters. That is close to the job your posting describes: take a loosely defined priority from problem definition to owner, decision and a number, without waiting for someone else to hand you the mandate.

I am also the person who tries to build the system so the next version of that problem does not need me in the room. At PriceKeel, the company I founded, I designed the guardrail engine and audit trail that lets Finance check a pricing decision without calling me first, and I set up the CRM, CPQ and deal-approval process from zero. At Applied Materials today I turn ambiguous input from Sales, Engineering and Accounts into one market view for a fast-growing semiconductor segment, and I automate the repetitive side of that synthesis with AI agents built on Claude so more of the week goes to judgment calls and less to spreadsheets.

Every job I have had has required the same move across boundaries: build the leadership decks and OKR cadence that keep a business aligned, then go sit with the people actually doing the work when the plan stops matching reality. I have done that with distributor partners at Sensata, with an 8-person team running client accounts at Pixis, and now with a founding team raising its first round. Darwinbox's bet on redesigning the Chief of Staff function around AI, instead of just staffing the old version of it, is the version of that problem I would want to work on next.

What I would bring on day one is a habit of turning ambiguity into a number and then building the mechanism that keeps producing it, plus AI-native habits that get there faster than a headcount-based org chart allows. Proof trail at adhithyabhaskar.vercel.app/ref/darwinbox.
