

PITCH DECK | DARWINBOX CHIEF OF STAFF

Most Chief of Staff roles manage a leader's calendar. This one asks for someone who builds the operating system underneath the Co-Founder, and I already build that kind of system today.

A record of turning ambiguous, cross-functional priorities into owners, decisions and a number, paired with AI-agent workflows already running in daily production, not a personal productivity hack.

\$700K+ / 2 quarters - Bleeders & Leakers margin recovery, from a vague mandate to a negotiated outcome

1,200 / \$433M - pricing opportunities synthesized into one leadership shortlist

PriceKeel - founder and CEO, built the guardrail engine and audit trail myself

AI agents on Claude - in daily production use today at Applied Materials

5-consultant team - led market sizing end-to-end, presented to Safran leadership

Redesigning the operating system around a founder is not a coordination job. It is **a systems problem wearing an admin title.**

What that actually requires

Turning loosely defined, ambiguous priorities into owners, decisions, cadence and a measurable outcome, without waiting for someone else to hand over a perfect mandate.

Building AI-native ways of working for research, synthesis, monitoring and follow-through, so the mechanism keeps running when the Chief of Staff is not in the room.

Orchestrating leadership across teams: resolving dependencies, challenging misalignment, and translating decisions into execution the org can actually run.

What I have already built at that layer

Took the **Bleeders & Leakers program** at Sensata from a vague "margin is leaking somewhere" mandate to a \$433M shortlist and \$700K+ recovered, negotiated in 2 quarters.

Founded **PriceKeel** to build exactly this kind of decision mechanism: a guardrail engine and audit trail that lets Finance check a pricing call without calling the founder first.

Run the **OKR cadence and leadership decks** that keep three different businesses aligned, automating the repetitive synthesis with AI agents built on Claude.

The through-line: I have already built the intelligence layer and the AI-native cadence this role asks for, just before anyone called it a Chief of Staff job.

What the posting is asking for, and where the proof already sits.

What the role covers

- "Build the intelligence layer. Synthesize inputs across the business, surface signal and risks, and ensure the Co-Founder sees what matters, when it matters."*
- "Turn ambiguity into action. Take loosely defined priorities from problem definition to owners, decisions, cadence, and measurable outcomes."*
- "Make AI operational. Go beyond personal productivity, identify where AI can fundamentally change how work gets done."*

My proof

- Intelligence layer, built:** synthesized 1,200 scattered pricing opportunities across 3 regions and 20 product lines into one shortlist leadership could act on.
- Ambiguity to outcome:** took a vague margin mandate to a negotiated \$700K+ recovery in 2 quarters, with the owners and cadence to keep it going.
- AI made operational:** AI agents built on Claude run daily at Applied Materials, cutting manual synthesis out of a recurring reporting cycle, not a personal habit.
- Decision mechanism, founder-side:** built PriceKeel's guardrail engine and audit trail myself, the same "explainable mechanism" language this role uses.

Bleeders and Leakers: a vague margin mandate to a negotiated number, with the mechanism that kept producing it.

Built as the owner of a program with no existing dashboard, no existing owner list and no existing cadence, the same starting point a founder's "figure this out" priority usually looks like.

The same instinct runs through PriceKeel and Applied Materials: build the decision mechanism and the AI-native cadence first, so the number keeps coming without a person re-doing the analysis every quarter.

What the first month building the operating system around the Co-Founder would look like.

WEEK 1 Sit inside the actual signal Talk to the functions feeding the Co-Founder's agenda today to find where synthesis is manual, delayed or duplicated, the same audit that grounded the Bleeders & Leakers program before a dashboard existed. ----- Why first: an intelligence layer built on assumptions instead of real bottlenecks is the fastest way to miss the mark.	WEEK 2-3 Ship the first AI-native mechanism Automate the highest-friction piece of research, monitoring or follow-through with an AI agent workflow, instrumented like the Claude-agent automation running at Applied Materials today. ----- Why now: one measured mechanism that survives without you in the room beats a week-one list of ideas.	WEEK 4 Turn the first win into the cadence Use what the first mechanism proved to set the OKR and review cadence the Co-Founder can run without a Chief of Staff re-explaining it every week. ----- Why this fast: a cadence only earns trust by showing it moved a real decision first.

CLOSE

Darwinbox needs someone who treats this seat as a systems problem, not a scheduling one. I have already built that system, twice.

The core proof is Sensata and PriceKeel together: a **\$700K+ margin program** that started as a vague mandate and ended as a repeatable, owned mechanism, and an **explainable decision guardrail and audit trail** I designed myself for a founder who needed to stop being the bottleneck on every call.

What is harder to find is someone who has done that inside a large, multi-region business **and** founded their own company around the exact same problem, while already running AI agents on Claude in production rather than treating AI as a slide in a strategy deck. That combination is what this seat needs most.
