Hiring Team, TikTok

The posting says this role "is not a support function," and the proof I would point to is a kit, not a title. At Sensata I built the one-pagers, talk tracks and objection handling that 50+ reps carried into OEM and distributor conversations, and win rates moved 30%. That is the specific thing a Branding PMM owns here: turning a product capability sales cannot explain on their own into language they can repeat cold in front of a brand advertiser.

The alpha/beta and feedback-loop piece of this role is also familiar ground. At Sensata I ran 30+ structured interviews with OEMs and distributors and converted that into product roadmap recommendations that raised CSAT 22%, the same participation-to-synthesis-to-roadmap motion your branding products need when a new ad format moves from pilot advertisers to general availability. I carry that same habit of closing the loop into what I automate now at Applied Materials with Claude agents: the tooling gets me to the recommendation faster, it does not replace doing the work to earn it.

I have also sat on the other side of an ad-platform account relationship, not just the enablement side. At Pixis I ran the account side of an 8-advertiser portfolio on budgets from $15K to $90K a month, built the vertical playbooks that cut churn in half, and used Amplitude and Tableau to flag which accounts needed attention before adoption stalled. That vertical-by-vertical instinct, knowing a fashion brand's media math is not a CPG brand's, maps onto the "develop vertical-specific strategies for brand advertisers" line in this posting more directly than a generic enablement background would.

What I would bring to NA PSO is full ownership of a GTM motion without being managed at the task level, which is how I have run things as a founder as much as inside a company. Proof trail, including the Sensata enablement kit and the Pixis account work, is at adhi-product.vercel.app/ref/tiktok.
