Hiring Team, MintMCP

At Sensata I owned the go-to-market for a new, genuinely technical sensing product line across North America and Europe: positioning, pricing, channel and launch as one motion, with messaging as the single source of truth the whole team built from. It closed its first year at \$2M+ in revenue. Your posting asks for the same job on a harder surface, taking an infrastructure capability enterprises have to trust and turning it into language a buyer who is not an engineer will act on.

The sales content and case studies I built off that launch went to 50+ reps and moved win rates 30%, because the material answered the objection a rep actually heard mid-deal, not the one marketing assumed from a briefing document. I got there by running 30+ interviews with OEMs and distributors before writing a word of positioning, and I would run that same discipline against the CIOs and platform buyers your gateway has to convince.

I also know what it is to build the narrative function from zero. I designed the PRD, ICP and positioning for an AI job-matching platform end to end, wrote the messaging myself, and carried it to its first 50 users with no one else to hand it to. That is the same founding-PMM math: no legacy deck to inherit, no brand team to lean on. I currently automate recurring market and pricing analysis with AI agents built on Claude at Applied Materials, so scaling output with your own internal agents is a stack I already work in daily, not a new habit to build.

I would bring that pattern, take a technical trust product and find the language the buyer who has to sign off on it will act on, to MintMCP's positioning work. Proof trail at adhi-product-ai.vercel.app/ref/mintmcp. Happy to talk whenever works on your side.
