Hiring Team, Rippling

Your posting asks for someone who can build the dashboards and capacity models that keep a Sales Development org's headcount, KPIs and pipeline generation honest before a quarter starts, not after a miss. I built exactly that discipline at Sensata, where a Power BI system I built tracked 1,200 pipeline opportunities against a \$627M target and let leadership catch \$433M in margin gaps before they became a quarter's problem.

At PriceKeel, the company I founded, I run the CRM, CPQ and forecast-and-pipeline-review cadence myself, the same operating loop this role runs for Sales Development: plan the numbers, build the system that tracks them, and hold the cross-functional line with RevOps Systems and Analytics teams when the data disagrees with the plan.

That Sensata dashboard did more than surface a number: it broke win rate, avg \$/win and stage distribution out by salesperson across 3 regions and 20 product lines, the same funnel-performance view your Sales Development leadership needs to plan headcount and route leads well. I also built the enablement that lifted rep win rates 30% for 50+ reps, so I know what a dashboard has to show a rep-facing team before they trust it.

I would bring someone who has already built the dashboard, run the pipeline reviews and sat across the table from RevOps Systems and Analytics, not someone learning the tools on the job. Proof trail at adhithyabhaskar.vercel.app/ref/rippling.
