

PITCH DECK | RIPPLING SR. REVENUE STRATEGY & OPERATIONS ANALYST

Sales Development needs headcount, KPI and capacity models that hold up before the quarter starts. I have already built that dashboard discipline, twice.

Pipeline generation, SDR capacity planning and funnel dashboards from someone who has run the pipeline-review cadence himself.

\$627M pipeline system validated, 1,200 opportunities tracked at Sensata

53% to 61% distributor margin lift via capacity-aware repricing

+35% / +30% qualified leads and rep win rate from enablement work

PriceKeel - founder, runs CRM, CPQ and pipeline-review cadence end to end

Claude AI agents - automates recurring revenue analysis at Applied Materials

The posting is direct: Sales Development needs headcount, KPI and capacity models that hold before growth outpaces the plan.

What losing that discipline runs into

A Sales Development org without a capacity model does not fail loudly. It fails as a headcount plan built on last quarter's ratios, a lead-routing rule nobody re-checked, and a QBR where nobody can say why SDR productivity slipped.

Systems, Analytics and Territory Ops all touch the same funnel, so a gap in one team's dashboard becomes everyone's guessing game at the next planning cycle, not just one team's problem.

The fix is not another Salesforce report. It is someone who treats headcount, KPIs and lead routing as one connected model instead of three separate spreadsheets.

What I have already run, at smaller scale

At **PriceKeel**, I run the pipeline-review and forecast cadence for my own company's deal flow, the same capacity-planning loop a Sales Development org runs before every quarter.

At **Sensata**, I built the Bleeders and Leakers Power BI dashboard that tracked 1,200 pipeline opportunities against a \$627M target, the same win-rate and stage-KPI discipline this role's dashboards need.

Both mean I have sat on the operating side of a revenue plan, building the model instead of only reading the report it produces.

A Sr. Revenue Strategy and Operations Analyst who plans headcount, builds SDR productivity dashboards, and partners with Systems, Analytics and Territory Ops is describing this exact loop: model the capacity, track the funnel, and keep the plan honest.

What the Sr. Revenue Strategy & Operations Analyst opening asks for, and where the proof sits.

What the role covers

- "Support Sales Development leadership in planning org structure, headcount, KPIs, and success metrics."*
- "Build and maintain dashboards and reports to monitor SDR productivity and funnel performance."*
- "Lead operational initiatives that improve lead routing, pipeline generation, SDR productivity, and GTM effectiveness."*

My Proof

- Headcount and KPI planning:** built the FY2026 Bleeders and Leakers dashboard that set win-rate, avg \$/win and stage-distribution targets by salesperson across 3 regions, the same success-metrics work this seat owns.
- SDR productivity dashboards:** modeled KPI frameworks in SQL and GA4 across 50K+ connected devices at Sensata, the same funnel-monitoring build this role runs for SDR productivity.
- Lead routing and pipeline generation:** built a CRM lead-scoring handoff from ad clicks to SQLs, and grew qualified leads 35% through campaign work at Sensata.
- Capacity planning at scale:** run PriceKeel's own CRM, CPQ and pipeline-review cadence, the operating rhythm a growing SDR org needs before it can plan headcount.

Bleeders and Leakers: track the funnel before you plan around it.

Built as a BU-wide Power BI system covering 1,200 pipeline opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, win rate and stage distribution checked by salesperson before leadership set the next quarter's targets.

\$433M

Margin Gaps Surfaced

Every gap traced to a specific deal record, the same rep-level detail a productivity dashboard needs to be useful in a QBR.

53% to 61%

Distributor Margin Lift

Repriced the channel logic and documented it, so a capacity call held past the first quarter instead of drifting back.

+35%

Qualified Leads Generated

Grown through campaign and lead-scoring work at Sensata, the same pipeline-generation lever this role owns for SDR.

At PriceKeel that same instinct became the operating model: I run the CRM, CPQ and pipeline-review cadence myself, so the plan and the dashboard are never two different stories.

What the first month on Rippling's Sales Development Ops team looks like.

WEEK 1 Learn the funnel and the org model Sit with Sales Development leadership and the Systems, Analytics and Territory Ops teams to walk the current headcount plan, KPI definitions and lead-routing rules, and shadow one SDR productivity review end to end. ----- Why first: the same instinct that had me learn PriceKeel's own pipeline before building anything on top of it.	WEEK 2-3 Own a dashboard cycle Take ownership of one SDR productivity or funnel-performance dashboard end to end: confirm the KPI definitions, build the report, and present it at the next planning checkpoint so Sales Development leadership trusts the number. ----- Why now: the same win-rate-by-salesperson discipline that made the Bleeders and Leakers dashboard usable in a QBR.	WEEK 4 Tighten the capacity model Update the SDR capacity and resource-allocation model with what the first cycle showed, and flag one lead-routing rule worth re-checking before the next quarter's planning process. ----- Why this fast: a capacity model only earns its keep if it gets re-checked every cycle instead of freezing at last quarter's ratios.
--	---	--

CLOSE

You are hiring someone to keep Sales Development's headcount, KPIs and pipeline generation honest every quarter. I have already built that discipline, twice.

The core proof is Sensata: a Power BI system tracking **1,200 pipeline opportunities against a \$627M target**, distributor margins lifted **from 53% to 61%**, and enablement work that lifted rep win rates **30% for 50+ reps**, all run cross-functionally with Sales, Finance and Deal Desk.

What is harder to find is someone who has also spent the last several months running the CRM, CPQ and pipeline-review cadence for his own company. **I built that at PriceKeel**, so the headcount-and-KPI planning cadence this role runs is not something I would need to learn on the job.
