PITCH DECK | NETFLIX PRICING STRATEGY MANAGER

Pricing a global, direct-to-consumer catalog is an elasticity and willingness-to-pay problem at scale. I have already closed a margin gap of that shape, with the model and the memo to prove it.

Global pricing frameworks, price elasticity and exec-facing recommendations from someone who also builds pricing tools on the side.

- **$700K+** margin recovered in 2 quarters, Sensata Bleeders and Leakers program
- **53% to 61%** distributor margin lift via willingness-to-pay-tested repricing
- **1,200** pricing opportunities ranked against a $627M target, 3 regions
- **PriceKeel** - founder of an AI-driven pricing decision-integrity layer
- **+12% YoY revenue, +8% share** via price realignment vs. 10+ competitors

WHY THIS DECK EXISTS

The hard part of pricing a global subscription catalog is not one number. It is one pricing logic that holds across every region and local market.

What pricing globally and locally at once runs into

A price that clears on willingness to pay in one market can be the wrong number a region over, so the framework has to flex without losing one coherent pricing principle.

Every local exception approved without a shared elasticity view becomes a decision nobody can defend to Finance, Data Science or Consumer Insights six months later.

The fix is not another pricing committee. It is a model built on real demand and competitive data, then a memo that gets a regional leader to a decision in one read.

What I have already run, at smaller scale

At **Sensata**, I led global pricing strategy for a multi-$100M Industrial BU across multiple product lines and regions, the same "one logic, many markets" problem.

I ran the **Bleeders and Leakers program**: a model that ranked pricing opportunities by region and product family against a hard revenue target, so leadership knew exactly where to act.

I am now building **PriceKeel**, a tool that gives Finance an audit trail for every pricing decision, because the logic only holds if someone can explain it later.

A Pricing Strategy Manager who builds global frameworks around elasticity and willingness to pay, then authors the memo that gets Finance, Data Science and Consumer Insights to one recommendation, is describing this exact loop, proven at a different scale.

THE REQ, MAPPED

What the Pricing Strategy Manager posting asks for, and where the proof sits.

What the role covers

> *"Develop pricing principles and global frameworks that integrate consumer demand, price elasticity, competitive landscape, and other factors."*

> *"Author memos and presentations that distill complex pricing trade-offs into clear strategic recommendations for senior executives and regional leadership."*

> *"Collaborate with a team across Finance, Strategy Planning & Analysis, Data Science, and Consumer Insights" on willingness to pay and price timing.*

My Proof

Pricing principles and global frameworks: led global pricing strategy for Sensata's Industrial BU, a multi-$100M business spanning multiple product lines and regions, built on elasticity and competitive gaps.

Exec-facing memos and recommendations: authored exec-facing revenue models and multimillion-dollar customer quotes directly with senior executives, distilling each trade-off into one recommendation.

Cross-functional pricing planning: the 53% to 61% distributor repricing required a model Finance would sign off on and a willingness-to-pay case Sales could defend to the partner.

AI tooling for pricing, a stated plus: founder of PriceKeel, an AI-driven decision-integrity layer for deal pricing, and I automate recurring pricing analysis with Claude agents at Applied Materials today.

THE SENSATA PROOF, IN DEPTH

Bleeders and Leakers: find the leak, price it correctly, make it hold.

Built as a BU-wide pricing model covering 1,200 pricing opportunities against a $627M target across 3 regions and 4 product families, with a pipeline funnel, regional scorecards, win rate and stage distribution by product line.

$433M

Margin Gaps Surfaced

Ranked every pricing opportunity by competitive gap and customer willingness to pay, so regional leadership could prioritize instead of debating anecdotes.

$700K+

Margin Recovered in 2 Quarters

Closed through negotiations built on the model, not an across-the-board price hike nobody could defend by region.

53% to 61%

Distributor Margin Lift

Repriced the channel logic itself against tested willingness to pay, so the gain outlived the quarter it shipped in.

The same program fed multimillion-dollar customer quotes and AP26 revenue scenarios built directly with senior executives. The common thread: every pricing call was backed by a model, written up as one recommendation, and measured after it shipped.

FIRST 30 DAYS

What the first month on Netflix's pricing desk looks like.

WEEK 1

Map the current framework

Pull the last two pricing cycles across regions, sit with Finance, Strategy Planning & Analysis, Data Science and Consumer Insights to hear where the current elasticity view and the local reality diverge.

Why first: the gap is usually visible in the data before anyone names it. Same move that started the Bleeders and Leakers program.

WEEK 2-3

Model and pressure-test

Build a willingness-to-pay and elasticity model for one priority market, pressure-test it with the cross-functional team, then write the memo that gets a regional leader to a decision in one read.

Why now: modeling against real demand, then verifying cross-functionally, is what made the 53% to 61% distributor gain stick.

WEEK 4

Make the framework repeatable

Turn the one-market fix into a global pricing principle: a demand-and-elasticity view, a memo format, and a checklist regional teams use for the next pricing decision without rebuilding the model from scratch.

Why this fast: a pricing framework only matters if it holds past the first region. Repeatability is the real ask behind "global and local" in the same sentence.

CLOSE

You are hiring someone to build a pricing framework that holds across every region. I have already run that logic at scale, and I am building the tool for the next one up.

The core proof is Sensata: **$700K+ in margin recovered in 2 quarters**, distributor margins lifted **from 53% to 61%**, and **+12% YoY revenue with +8% market share** from price realignment against 10+ competitors, every call backed by an elasticity model and written up for senior executives.

What is harder to find is someone who has also spent the last several months building the AI-driven pricing decision tool a team running pricing globally and locally would eventually want internally. **I am building that at PriceKeel right now**, so the cross-functional, memo-first instinct this role asks for is not something I would need to develop on the job.
