Hiring Team, DaySmart

Your posting asks for product video built for AI discoverability, question-shaped content that surfaces when a buyer asks an AI assistant instead of typing a search query. That is a new channel, but not a new discipline. At Plug Power I closed keyword-strategy gaps that raised organic search visibility 35%, the same intent-mapping work question-shaped content needs to hold up once it is live. I read that line in your posting twice, because it is the part most PMM resumes will not know how to answer.

The core of the role, though, is the part I have already run end to end: positioning, launches and the sales support that makes both stick. I owned go-to-market for Sensata's new sensing products into \$2M+ first-year revenue, then rewrote technical spec sheets into competitive positioning that lifted conversion 15% on the launches that mattered most. I built the case studies and decks 50+ reps used in live deals, sourced from 30+ interviews with OEMs and distributors, and that enablement stack moved win rates up 30%. Slick's appointment and payment software runs across UK and US markets; the job is the same one I have been doing, positioning a technical product so both buyers and sales teams can act on it.

On the AI-tooling fluency your posting names outright: I already work daily inside AI agents built on Claude at Applied Materials, automating the recurring market and competitive research so the time goes into the judgment call instead of the spreadsheet. That is not a certification I collected for a resume, it is how I currently do the job, and it is exactly the fluency your posting is screening for rather than assuming.

Market research is where I start a launch, not where I check a box after it is scoped. I track adoption and expansion signal in SQL, GA4 and Tableau, and I would want the first month here spent the same way: sitting with customer research on why Slick users adopt or churn, then building the positioning and enablement that follows from it. Proof trail at adhi-product.vercel.app/ref/daysmart.
