Hiring Team, Glean

At Plug Power I grew the marketing database across channels while automating the WordPress-to-Pardot lead flow, cutting cost per lead 50% without adding spend, then closed the loop on the surrounding Salesforce-connected Mar-Tech stack (Adobe Analytics, GA, Google Tag Manager) so campaign reporting ran on its own. Your Mountain View posting asks for that same database-growth discipline stretched across content syndication, email nurtures, direct mail and referral programs, all landing in Salesforce for the BDRs to work.

Webinars and account-based plays are not separate skills for me, they are the other half of the same funnel. At Sensata I launched multi-channel campaigns for new sensing product launches across North America and Europe, growing qualified pipeline 35%, then built the KPI frameworks that segmented high-intent accounts into ABM-style lists and the enablement decks that helped 50+ reps close them, lifting win rates 30%. A demand-gen calendar only holds together when sales trusts where a lead came from, and I earned that trust by staying in the operational loop with BDRs instead of handing off a list.

The analytics half carries just as far. At Pixis I owned P&L for an 8-client, \$15K to \$90K-per-client-per-month portfolio and used Amplitude and Tableau to cut churn 50% and lift ROAS 40%, the same conversion and cost-effectiveness read your posting wants applied to a webinar and content calendar. At Applied Materials I now automate the repetitive side of my own forecasting with AI agents built on Claude, the quick adoption of new tooling that keeps a fast-moving demand-gen stack from becoming the bottleneck.

Glean's search product sits in front of both a technical buyer and a business buyer, which is exactly the kind of program I want to run next: broad-net content and nurtures for the long tail, webinars and ABM for the accounts big enough to earn a direct-mail touch. Proof trail at adhi-growth-ai.vercel.app/ref/glean.
