Hiring Team, Alignment Research Center

I set up PriceKeel's CRM, CPQ, forecast and deal-approval mechanics from a blank page, with no existing process to inherit, while I was also raising the company's first round. That is the exact shape of the chief of staff job your posting describes: defining the workflows and structure an organization needs rather than fitting into ones that already exist.

Hiring is the part of the role I have real reps in. I hired and led an 8-person team at Pixis, carrying P&L targets while cutting client churn 50% through account strategy I built myself, and I hired and managed marketing staff at Plug Power, with budget plans I built and presented to leadership for approval every quarter. Running decision meetings, defining an interview process, and growing a team as it scales are not abstractions to me; they are what I did at both stops, and what I am doing again right now as PriceKeel adds its first hires.

The automation thread in your posting is one I am living day to day. At Applied Materials I built AI agents on Claude that act on forecasting and market analysis instead of just summarizing it, cutting the manual work out of recurring reporting so the team can spend its time on the harder problem underneath. An organization that expects AI to become the main way it scales needs someone who has already rebuilt their own workflows around it, not someone learning the idea for the first time.

I would welcome the chance to talk through how the PriceKeel build and the Pixis and Plug Power hiring work map onto running operations for a small, fast-scaling research team. Proof trail at adhithyabhaskar.vercel.app/ref/alignmentorg.
