Hiring Team, Uber

Your posting describes the job as replacing regional fragmentation with one unified methodology, pipeline hygiene, sales playbooks, handoff protocols, built once and run everywhere. That is the exact shape of the FY2026 Bleeders and Leakers dashboard I built at Sensata: 1,200 pipeline opportunities tracked against a $627M target by win rate, dollar-per-win and stage distribution, across 3 regions and 20 product lines that had each been running their own version of the same funnel. One scorecard replaced all of them, and it surfaced $433M in margin gaps that fed a $700K recovery in two quarters.

The AI-experimentation half of the role is not new ground either. At Applied Materials I run AI agents built on Claude against my own repetitive revenue reporting and forecasting work, and at PriceKeel I built the guardrail engine that turns a pattern buried in closed deals into an explainable rule a deal desk can actually use. Both are the same instinct your posting asks for: scout what the AI can take off a human's plate, then build the framework so it holds up at scale, not just once.

I've also done the part of this job that has nothing to do with dashboards: getting people to change how they work when you don't manage them. I standardized enablement playbooks and handoff protocols for 50+ sales reps across regions at Sensata, lifting win rates 30%, by making the new process easier to follow than the old one, not by mandating it. Before that, at Pixis, I carried P&L and portfolio-health targets across an 8-client book while managing the team running it, the same account-capacity math this role protects for Account Managers.
