

PITCH DECK | GOOGLE PRODUCT STRATEGY AND OPERATIONS

This team turns financials, metrics and themes from across an entire tech ecosystem into one executive-ready view, with the discretion that comes with it. I already run that loop.

Business-critical insight, executive presentations and ad hoc special projects from someone who builds the model and sits in the room where it gets used.

\$433M in margin gaps surfaced for leadership via a 1,200-opportunity Power BI system

+8% market share from a competitive-benchmarking read turned into an executive recommendation

AP26 revenue models and site-transition strategy run directly with senior executives

150+ facilities, 10+ competitors analyzed for a market-entry feasibility call to Safran leadership

Claude AI agents automating recurring strategy analysis at Applied Materials

This req is really two disciplines held by one person: the analysis that finds the signal across a sprawling ecosystem, and the discretion to turn it into one executive call.

What falls apart without that person

A small team covering the entire external tech ecosystem, from early startups to large public companies, cannot afford a slow read: by the time a theme reaches a senior stakeholder, the financials and metrics behind it have to already be reconciled, not still in dispute.

Ad hoc special projects do not come with a template. Without someone who can structure an ambiguous question fast and hold it with discretion, each one either stalls or leaks before leadership has decided what to do with it.

The fix is one person who treats external analysis, executive communication and discretion as one job, not three.

What I already run

At **Applied Materials**, I fold Sales, Engineering and Accounts input into one read on where the semiconductor market is headed, the same external-ecosystem signal-finding this seat runs for Google.

At **Sensata**, I built the Bleeders and Leakers system that turned 1,200 scattered opportunities into \$433M in margin gaps for leadership, then carried that same rigor into AP26 revenue models directly with senior executives.

Both mean I have already built the analysis and sat in the room with the senior stakeholder who has to act on it with discretion, not just handed off a deck.

Bringing together data, insights and deliverables for senior leaders, analyzing themes and financials across the external tech ecosystem, and driving ad hoc special projects with discretion describes this exact loop.

What the Product Strategy and Operations opening asks for, and where the proof already sits.

What the role covers

Project manage workstreams delivering business critical insights across the entire external tech ecosystem, from small startups to large public companies.

Analyze themes, financials and metrics, and thoughtfully elevate them to senior stakeholders with discretion.

Build executive presentations and drive forward ad hoc special projects.

Bring together a cohesive set of data, insights and deliverables for senior leaders.

My Proof

External ecosystem analysis: sized the semiconductor market at Applied Materials by reconciling Sales, Engineering and Accounts input, and assessed market-entry feasibility across 150+ facilities and 10+ competitors for Safran.

Financials, metrics, discretion: built the FY2026 Bleeders and Leakers Power BI dashboard at Sensata, surfacing \$433M in margin gaps by salesperson and product line for leadership to prioritize.

Executive presentations, ad hoc projects: shaped AP26 revenue models and site-transition strategy directly with senior executives, the kind of ad hoc, discretion-heavy project this seat runs constantly.

Cohesive deliverables: carry those models into the leadership decks and OKR-driven weekly and quarterly business reviews running at Applied Materials today.

Bleeders and Leakers: turn 1,200 scattered opportunities into one number leadership can act on.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, with a pipeline funnel, regional scorecards and win-rate view checked before leadership moved on the next priority.

\$433M

Margin Gaps Surfaced

Every gap traced to a specific salesperson and product line, the same granularity a cross-ecosystem review needs to act instead of debate.

+8%

Market Share Gained

10+ competitors benchmarked, then turned into a recommendation that drove +12% YoY revenue alongside it.

53% to 61%

Distributor Margin Lift

Repriced the channel logic and documented it so the read held past the first review, not just the meeting it was presented in.

That same instinct runs the Applied Materials seat today: fold Sales, Engineering and Accounts input into one market view, then keep the leadership decks and OKR reviews current instead of stale.

What the first month inside Product Strategy and Operations looks like.

WEEK 1

Map the ecosystem and the current cadence

Sit with the small team and the senior stakeholders it serves to learn how themes, financials and metrics currently move from raw data to an executive call, and shadow one existing deliverable end to end before touching anything.

Why first: the same instinct that had me learn Applied Materials' Sales, Engineering and Accounts loop before building on top of it.

WEEK 2-3

Own one ad hoc special project end to end

Take one open cross-ecosystem question, build the model against the underlying financials and metrics, and present a data-driven recommendation to a senior stakeholder with the discretion the project calls for, the same loop that turned Bleeders and Leakers into a leadership decision at Sensata.

Why now: the fastest way to earn trust on an unfamiliar ecosystem is to ship one complete, discreet recommendation, not a slide of open questions.

WEEK 4

Propose the reporting cadence

Propose the recurring review that keeps that recommendation current: who owns it, how often it gets re-checked against the ecosystem's next move, mirroring the weekly and quarterly business reviews already running at Applied Materials and Sensata.

Why this fast: a strategy function that produces one analysis is not finished; the cadence is what makes leadership act on it every cycle, not just once.

CLOSE

You are hiring someone to turn a sprawling external tech ecosystem into one executive-ready view, built with the discretion that comes with it. I already run that loop.

The core proof is Sensata: a Power BI system tracking **1,200 pricing opportunities against a \$627M target**, \$433M in margin gaps surfaced for leadership, and a competitive-benchmarking recommendation that drove **+8% market share**.

What sits alongside it is the external-ecosystem read itself: at Applied Materials I fold Sales, Engineering and Accounts input into one strategic view of where the market is headed, and at Safran I assessed market-entry feasibility across **150+ facilities and 10+ competitors** for a leadership audience. The analysis, the discretion and the executive deliverable are not three separate skills to learn on the job.
