

PITCH DECK | TANIUM SENIOR DIGITAL MARKETING MANAGER, PAID SEARCH

Tanium's paid search mandate is really a measurement problem wearing a budget hat: Google and Microsoft dollars only earn their keep if the tracking underneath them is trustworthy. I have already run both halves of that loop.

Owned Paid Search budgets end to end, then built the measurement and reporting layer that made the spend defensible.

\$100K/month Google and Microsoft Ads budgets owned at Plug Power

-25% CPA from bid optimization and 15+ A/B tests

-50% cost per lead from a MarTech automation rebuild

+35% organic visibility from paid and SEO alignment

AI agents built on Claude automating recurring reporting at Applied Materials

The role is not "manage the ad accounts." It is making Google and Microsoft spend provably accountable to pipeline, in public, every single week.

What that actually requires

Strategy, budget planning and daily pacing across global paid search and video in one motion, not two calendars that drift apart by Q2.

A measurement layer underneath the spend: naming conventions, tracking parameters and conversion events that survive the handoff from ad platform to CRM.

A testing and creative cadence that keeps Web, Integrated Campaigns, product/content marketing and the organic search counterpart pulling the same direction.

What I have already run

At **Plug Power**, I owned Paid Search and Paid Social across Google Ads, Microsoft Ads, Meta and LinkedIn, planning and pacing \$100K/month across multiple business units, for ~25% CPA.

I tracked conversion events across **Salesforce, Adobe Analytics, GA and Google Tag Manager** so the data held up from ad click to pipeline, then built the dashboards that reported it every cycle.

I partnered with web and creative teams on **15+ landing-page A/B tests** and with the SEO side of the house on keyword insight, lifting organic visibility 35% alongside paid.

The through-line: every paid-search program I have run was judged on whether the budget provably moved pipeline, not on whether the ad accounts looked busy.

What the posting asks for, and where the proof already sits.

What the role covers

- "Lead end-to-end strategy and execution of global paid search and video campaigns across Google & Microsoft."*
- "Ensure rigorous and reliable measurement by implementing consistent naming conventions, tracking parameter management, and conversion event tracking setup."*
- "Partner with the Web team on landing page strategy and A/B testing... Collaborate with organic search counterpart to align paid and organic strategies."*

My proof

- Plug Power, Paid Search across Google and Microsoft:** owned Google Ads, Microsoft Ads and Paid Social end to end, with budget planning and pacing on \$100K/month, for -25% CPA.
- Plug Power, measurement rigor:** tracked conversion events and tagging across Salesforce, Adobe Analytics, GA and Google Tag Manager, then built the dashboards and reporting cadence leadership read every cycle.
- Plug Power, web and SEO partnership:** ran 15+ landing-page A/B tests with the web and creative teams, and shared keyword insight with the SEO side for +35% organic visibility.
- Applied Materials, staying ahead of the curve:** automate recurring analysis with AI agents built on Claude, the same instinct behind tracking where agentic and AI-driven bidding tools go next.

Own the budget, build the measurement layer under it, then **keep paid and organic pointed at the same terms.**

Same pattern at Plug Power: plan and pace the spend, prove the tracking holds from click to pipeline, then close the loop with the teams running the rest of the funnel.

-25% CPA

Google & Microsoft Paid Search

Bid optimization and 15+ A/B tests across Paid Search and Paid Social, on \$100K/month budgets spanning multiple business units.

-50% Cost Per Lead

MarTech Automation Rebuild

Automated the WordPress and Pardot lead flow and the Salesforce, Adobe Analytics, GA and Google Tag Manager stack for closed-loop reporting.

+35% Organic Visibility

Paid and SEO Alignment

Closed keyword-strategy gaps with the SEO counterpart and built the partnership that kept organic and paid pointed at the same terms.

None of these were a dashboard nobody opened. Each one closed the loop from ad spend to a number the business was accountable for.

What the first month owning Paid Search and video at Tanium looks like.

WEEK 1 Audit the measurement layer Map naming conventions, tracking parameters and conversion events across the current Google and Microsoft accounts, the same ad-platform-to-CRM check that kept Plug Power's reporting honest. ----- Why first: you cannot pace a budget you cannot trust the tracking on.	WEEK 2-3 Stand up the budget-to-pipeline dashboard Build the reporting cadence that ties pacing, spend and conversion data back to pipeline stage, so Integrated Campaigns and product/content marketing see the same number leadership does. ----- Why now: the same closed-loop dashboard that gave Plug Power's leadership a transparent read every cycle.	WEEK 4 Open the Web and SEO partnership Launch the first landing-page A/B test with the Web team and the first shared keyword review with organic search, the same cadence that moved Plug Power's conversion rate and organic visibility together. ----- Why this fast: the same habit that keeps my own reporting moving at Applied Materials today, not a plan for someday.
---	---	--

CLOSE

You are hiring someone to make Google and Microsoft spend provably accountable to pipeline, across search and video, every week. I have already run that system once.

The budget half: **\$100K/month** owned across Google Ads, Microsoft Ads and Paid Social at Plug Power, planned and paced across multiple business units, for **-25% CPA**.

The measurement half: conversion tracking rebuilt across Salesforce, Adobe Analytics, GA and Google Tag Manager for a **-50% cost per lead**, plus a Web and SEO partnership that lifted organic visibility 35% alongside paid. At Applied Materials I now automate my own recurring reporting with agents built on Claude, because rebuilding the same report every cycle is time that should go into the next test.
