Hiring Team, Deepgram

Your posting says the desk is not a control function, its job is to help Sales win better deals faster, at prices you can defend. That is the exact bet I made with PriceKeel: a guardrail engine that reads a discount exception against a company's own closed-won and closed-lost deals and recommends an explainable path, so a routine deal clears without a meeting and the hard ones get a same-day answer instead of a week in someone's inbox.

I have run the margin side of this work inside a live business, not just designed it from outside one. At Sensata I led global pricing for the Industrial BU and recovered $700K+ in margin in two quarters through the Bleeders and Leakers program, negotiating discount exceptions off documented competitive gaps and willingness to pay, and raised distributor margins from 53% to 61% repricing parts sold through channel. I built the Power BI system behind that work: 1,200 opportunities tracked against a $627M target with win rate and stage distribution scored by salesperson and product line, the same discount-band insight your desk needs to show Sales and Finance where deals are actually landing. I also sat in the room for the multimillion-dollar customer quotes that program fed, which is where a desk's judgment either holds up or doesn't.

The AI-native part of your desk is already how I work. As Strategic Marketing III at Applied Materials I run AI agents built on Claude against repetitive pricing and forecasting analysis, the agent does the first pass and I make the call and tighten the rules, which is the exact loop your posting describes for reviewing non-standard deals. At PriceKeel I set up and run our own CRM and CPQ, forecast and pipeline reviews, and the audit trail that keeps every approval and term Finance-ready, so building out CPQ in Salesforce so the playbook lives in the quote is a system I have already built once from nothing.

I would bring someone who has been on both sides of a deal desk: the one asking for the exception and the one writing the rule that governs it. Proof trail at adhi-pricing-ai.vercel.app/ref/deepgram.
