Hiring Team, Pigment

At Sensata I ran the Bleeders and Leakers program: a deal-by-deal review of every live quote against competitive gaps and customer willingness to pay, tracked in a Power BI dashboard against a \$627M target across 1,200 opportunities and 3 regions. I recovered \$700K+ of margin in two quarters by fixing the discount and deal structure on each one, not just flagging the shortfall on a report. That is the loop your posting describes for a founding Deal Desk hire: catch the pricing and structure problem before it reaches sign-off, not after the quote is already out.

My opinion on deal desks is that the real leak is rarely the price line, it is the structure nobody signed off on before the quote moved. When I repriced Sensata's distributor and channel-partner terms from 53% to 61% margin, the fix only held because I routed every non-standard structure through Sales and Finance before it reached the customer. I ran that same discipline on multimillion-dollar customer quotes with senior executives, where pricing, product and billing terms all had to be right before the deal could close, the kind of quote accuracy your posting asks for before an order form goes out.

That habit is also why I started PriceKeel. I kept watching discount exceptions get approved with no record of why, so I built the audit trail that gives Finance real evidence for the call, and a guardrail engine that catches the exception pattern before it repeats. I run the company's CRM and CPQ configuration, forecast and pipeline reviews, and deal approvals myself, the same quote-to-approval rhythm a founding Deal Desk function has to build from scratch as volume scales.

I would bring that same pattern, find the structural leak, fix it, make it explainable to Finance, to Pigment's Deal Desk. Proof trail at [adhi-pricing-ai.vercel.app/ref/pigment](https://adhi-pricing-ai.vercel.app/ref/pigment).
