Hiring Team, ElevenLabs

Your posting asks for someone who builds "tools, automations, and dashboards that empower sales, data, and product teams to execute with precision." I built exactly that shape of system at Sensata: the FY2026 Bleeders and Leakers Power BI dashboard tracked 1,200 pipeline opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, with win rate, average \$/win and stage distribution surfacing \$433M in margin gaps for leadership to act on. That is the KPI reporting layer your team needs, just built for industrial parts instead of voice AI.

I run the other half of the job too: end-to-end process management. At PriceKeel, the company I founded, I own the CRM and CPQ configuration, the forecast and pipeline review cadence, and the deal approvals myself, so I know what breaks when a process lives in someone's head instead of a system. At Applied Materials I automate recurring revenue analysis with AI agents built on Claude, which is the same instinct your posting is describing when it asks for strategic automations, not just reports.

I also like that this is a role with real analytical teeth and no fixed script. At Sensata I did not just build the dashboard, I used it to negotiate \$700K+ in margin back in 2 quarters and move distributor margins from 53% to 61%. That is the data-driven analysis and experimentation your posting names, applied until it changed a number leadership cared about, and it is the habit I would bring to a company whose product is itself an AI agent doing precision work for humans.

Happy to walk through the dashboard build or the automation work in more detail. Proof trail at adhithyabhaskar.vercel.app/ref/elevenlabs.
