Hiring Team, Stemz Healthcare

Your posting says Soul Space is neither a strategy role nor a BD role nor an ops role, it is all three at once with nobody else to hand the pieces to. I am living that split today. I founded PriceKeel, a B2B SaaS pricing product, with no playbook to copy: I designed the business model and the pricing, built the guardrail engine myself, set up the CRM and CPQ, and I am running pilots and raising a first round while doing it. That is the concept-to-commercialization motion your req is testing for, in progress right now, not a story from an old job.

The commercial-model half of the role, pricing design, financial projections, budgets that hold up under scrutiny, is work I have run at scale. At Sensata I built value-based and competitive pricing for a multi-$100M business, then closed it: $700K+ recovered in two quarters, distributor margins raised from 53% to 61%, and AP26 revenue forecasts built directly with senior executives. A pricing model that cannot survive a real negotiation is just a spreadsheet, and I have had to make mine survive one.

On the partnership and market-entry side, I led a 5-consultant team at Simon Vision Consulting that sized a market of 170 institutional targets, including healthcare facilities, down to a SAM of 28, then presented the go-to-market and partnership plan directly to the client's leadership. Building trust with a gatekeeper organization and turning a long list of targets into a prioritized, fundable plan is the same muscle a pilot-school rollout needs: find the real addressable set, then make the case to the people who control access to it.

I would welcome fifteen minutes to talk through how I would start on pricing and the first two or three pilot-school relationships. Proof trail at adhithyabhaskar.vercel.app/ref/stemz-healthcare.
