Hiring Team, Cisco

At Sensata, I ran a program called Bleeders and Leakers that ranked 1,200 pricing opportunities against a $627M target by reading competitive gaps and customer willingness to pay, then closed $700K of that in two quarters through negotiations built on the elasticity data, not across-the-board price hikes. That is the same muscle your Pricing Strategy and Monetization team is asking for: analyze buyer behavior and willingness to pay, then turn it into a pricing move that actually holds.

The willingness-to-pay work was one half of the job. The other half was testing and refining the pricing logic itself: I rebuilt how parts sold through distribution were priced and raised distributor and channel-partner margins from 53 percent to 61 percent, a change that stuck past the first repricing pass because the logic underneath it changed, not just the number on the invoice. I ran that across three regions and twenty product lines while carrying P&L and revenue targets for the Industrial BU, and I built the leadership decks and KPI reviews that came with it, which is the discount-monitoring and executive-reporting half of your posting.

Your preferred qualifications mention subscription, consumption and licensing models, and AI-driven pricing, and I can speak to both directly rather than by analogy. I am currently building PriceKeel, a decision-integrity layer for B2B SaaS deal pricing with its own CRM, CPQ and deal-approval workflow, which is exactly the subscription-pricing muscle my industrial-hardware background at Sensata does not cover on its own. At Applied Materials now, I build competitive, value-based pricing for a fast-moving semiconductor market and automate the recurring analysis with AI agents built on Claude, so pricing time goes into the actual decision instead of the tenth version of the same pivot table.

Cisco's security portfolio is big and fast-moving enough that pricing decisions need to hold up across a lot of SKUs and a lot of partners at once. That is the scale problem I have already spent a pricing cycle on, and the one I am building a product around in my own time. I would like to bring both to this seat. More detail at adhi-pricing-ai.vercel.app/ref/cisco.
